ZOOM VIDEO DEPOSITION OF EXPERT WITNESS
DOUGLAS SCHMIDT, PH.D.
THURSDAY, MARCH 3, 2022

JOB NO. 5116748
REPORTED BY: D'ANNE MOUNGEY, CSR 7872

<p>1 DEPOSITION OF DOUGLAS SCHMIDT, PH.D., TAKEN ON BEHALF OF</p> <p>2 GOOGLE AT REDWOOD CITY, CALIFORNIA, COMMENCING AT</p> <p>3 9:08 A.M. ON THURSDAY, MARCH 3, 2022, BEFORE D'ANNE</p> <p>4 MOUNGEY, CSR 7872.</p> <p>5</p> <p>6</p> <p>7 APPEARANCES OF COUNSEL:</p> <p>8</p> <p>9 FOR SONOS, INC.:</p> <p>10 LEE SULLIVAN SHEA & SMITH, LLP.</p> <p>11 BY: GEORGE LEE, ESQ.</p> <p>12 MICHAEL BOYEY, ESQ.</p> <p>13 656 W RANDOLPH STREET</p> <p>14 SUITE 5W</p> <p>15 CHICAGO, ILLINOIS 60661</p> <p>16 1-312-754-9602</p> <p>17 LEE@LS3IP.COM</p> <p>18</p> <p>19 FOR GOOGLE, LLC:</p> <p>20 QUINN EMANUEL URQUHART & SULLIVAN, LLP</p> <p>21 BY: MARC L. KAPLAN, ESQ.</p> <p>22 555 TWIN DOLPHIN DRIVE</p> <p>23 5TH FLOOR</p> <p>24 REDWOOD SHORES, CALIFORNIA 94065</p> <p>25 312-705-7400</p> <p>MARCKAPLAN@QUINNEMANUEL.COM</p> <p>ALSO PRESENT:</p> <p>KIMBERLEE DECKER, VIDEOGRAPHER</p>	<p>1 REDWOOD CITY, CALIFORNIA</p> <p>2 THURSDAY, MARCH 3, 2022; 9:08 A.M.</p> <p>3</p> <p>4</p> <p>5 THE VIDEOGRAPHER: Good morning. We're on 09:08:27</p> <p>6 the record at 9:08 a.m. on March 3rd of 2022.</p> <p>7 All participants are attending remotely.</p> <p>8 Audio and video recording will continue to</p> <p>9 take place, unless all parties agree to go off the</p> <p>10 record. 09:08:58</p> <p>11 This is media unit 1 of the recorded</p> <p>12 deposition of Douglas Schmidt, Ph.D., taken by</p> <p>13 counsel for Sonos in the matter of "Google versus</p> <p>14 Sonos," U.S. District Court, Northern District of</p> <p>15 California. 3:20-CV-06754. 09:09:16</p> <p>16 And "Sonos versus Google, U.S. District</p> <p>17 Court, Northern District of California.</p> <p>18 3:21-CV-7559.</p> <p>19 My name is Kimberlee Decker from Veritext</p> <p>20 Legal Solutions and I am the videographer. The 09:09:39</p> <p>21 court reporter is D'Anne Moungey. I am not related</p> <p>22 to any party in this action, nor am I financially</p> <p>23 interested in the outcome.</p> <p>24 Counsel and all present will now state</p> <p>25 their appearances and affiliations for the record. 09:09:50</p>

<p>1 I N D E X</p> <p>2</p> <p>3 WITNESS EXAMINATION PAGE</p> <p>4 DOUGLAS SCHMIDT, PH.D.,</p> <p>5 BY MR. KAPLAN 6</p> <p>6</p> <p>7</p> <p>8</p> <p>9</p> <p>10 E X H I B I T S</p> <p>11</p> <p>12 NO. PAGE DESCRIPTION</p> <p>13 EXHIBIT 1 7 EXPERT REPORT OF DOUGLAS C.</p> <p>14 SCHMIDT</p> <p>15 EXHIBIT 2 14 U.S. PATENT U.S. 9,967,615</p> <p>16 EXHIBIT 3 31 U.S. PATENT U.S. 10,779,033</p> <p>17 EXHIBIT 4 71 U.S. PATENT U.S. 2011/000433</p> <p>18 EXHIBIT 5 84 U.S. PATENT U.S. 2012/00899</p> <p>19 EXHIBIT 6 121 KEY STL FEATURES: CONTAINERS, AND</p> <p>20 ALGORITHMS</p> <p>21</p> <p>22</p> <p>23 QUESTIONS INSTRUCTED NOT TO ANSWER</p> <p>24</p> <p>25 (NONE)</p> <p>Page 3</p>	<p>1 If there are any objections to proceeding, please</p> <p>2 state them at the time of your appearance, beginning</p> <p>3 with the noticing attorney.</p> <p>4 MR. KAPLAN: This is Marc Kaplan from Quinn</p> <p>5 Emanuel Urquhart & Sullivan on behalf of Google. 09:10:00</p> <p>6 MR. LEE: This is George Lee from</p> <p>7 Lee Sullivan Shea & Smith on behalf of Sonos. I</p> <p>8 also have with me today Michael Boyea from Lee</p> <p>9 Sullivan Shea & Smith.</p> <p>10 One clarification is that this deposition 09:10:19</p> <p>11 is being taken by Mr. Kaplan, who is counsel for</p> <p>12 Google in the case.</p> <p>13 THE VIDEOGRAPHER: Will the court reporter</p> <p>14 please swear in the witness.</p> <p>15</p> <p>16 DOUGLAS SCHMIDT, PH.D.,</p> <p>17 having been first duly sworn by the reporter, was</p> <p>18 examined and testified as follows:</p> <p>19</p> <p>20 MR. KAPLAN: Ready to proceed? 09:10:52</p> <p>21 THE VIDEOGRAPHER: Please proceed.</p> <p>22 ///</p> <p>23 ///</p> <p>24</p> <p>25 09:10:54</p> <p>Page 5</p>

<p>1 EXAMINATION</p> <p>2 BY MR. KAPLAN:</p> <p>3 Q Dr. Schmidt, can you please state your</p> <p>4 first and last name for the record.</p> <p>5 A D-O-U-G-L-A-S, S-C-H-M-I-D-T. 09:11:01</p> <p>6 Q And your county of residence?</p> <p>7 A Williamson County.</p> <p>8 Q Did you meet with any attorneys for Sonos</p> <p>9 to prepare for your deposition today?</p> <p>10 A I did. 09:11:19</p> <p>11 Q Who did you meet with?</p> <p>12 A I met with George Lee, Jae Pak, and Michael</p> <p>13 Boyea.</p> <p>14 Q How long did you meet with Mr. Pak, Mr. Lee</p> <p>15 and Mr. Boyea? 09:11:37</p> <p>16 A At what point?</p> <p>17 Q To prepare for your deposition today.</p> <p>18 A Probably maybe four to six hours.</p> <p>19 Q Did you meet with anyone else besides the</p> <p>20 attorneys for Sonos to prepare for your deposition 09:11:58</p> <p>21 today?</p> <p>22 A No.</p> <p>23 Q Dr. Schmidt, how long did you spend</p> <p>24 preparing your claim construction declaration?</p> <p>25 A I don't recall off the top of my head. 09:12:19</p> <p style="text-align: right;">Page 6</p>	<p>1 A That is correct.</p> <p>2 Q Do you do expert consulting out of the</p> <p>3 litigation context?</p> <p>4 A I've done expert consulting outside the</p> <p>5 litigation context, that's correct, yes. 09:14:01</p> <p>6 Q Roughly what percentage of your income do</p> <p>7 you think comes from expert consulting for</p> <p>8 litigation?</p> <p>9 A Oh, that's a good question.</p> <p>10 Again, I'm not really sure off the top of 09:14:14</p> <p>11 my head.</p> <p>12 Q Do you think it would be around 50 percent?</p> <p>13 A No.</p> <p>14 Q Do you think it would be more than</p> <p>15 50 percent or less than 50 percent? 09:14:24</p> <p>16 A Less than 50 percent.</p> <p>17 Q Do you think it would be more than</p> <p>18 25 percent?</p> <p>19 A I'm not sure. I haven't looked at the -- I</p> <p>20 haven't looked at my tax -- 1099s for the past year. 09:14:36</p> <p>21 I haven't got around to doing my taxes yet, so I</p> <p>22 don't know.</p> <p>23 Q Dr. Schmidt, you've been deposed before;</p> <p>24 right?</p> <p>25 A That's correct. 09:14:48</p> <p style="text-align: right;">Page 8</p>
<p>1 Q So you have access to Exhibit Share?</p> <p>2 A I do.</p> <p>3 Q Could you open up Exhibit 1, please.</p> <p>4 A Sure.</p> <p>5 (Whereupon, Google Exhibit 1 was 09:12:32</p> <p>6 marked for identification by the</p> <p>7 Court Reporter.)</p> <p>8 THE WITNESS: Okay. I have it open.</p> <p>9 BY MR. KAPLAN:</p> <p>10 Q This is the claim construction declaration 09:12:49</p> <p>11 that we're going to be discussing today and that you</p> <p>12 prepared; is that right?</p> <p>13 A That is correct.</p> <p>14 Q Roughly how long do you think you spent</p> <p>15 preparing this declaration? 09:13:03</p> <p>16 A I'm sorry. I don't recall off the top of</p> <p>17 my head. It was not something I remember tracking</p> <p>18 in my mind.</p> <p>19 Q Do you think it was more than 20 hours?</p> <p>20 A 20 hours is probably a rough estimate. 09:13:25</p> <p>21 Something along those lines.</p> <p>22 Q Dr. Schmidt, who is your current employer?</p> <p>23 A I'm currently employed by Vanderbilt</p> <p>24 University.</p> <p>25 Q You also do expert consulting? 09:13:45</p> <p style="text-align: right;">Page 7</p>	<p>1 Q So you're familiar with the ground rules of</p> <p>2 depositions; is that fair?</p> <p>3 A Yes.</p> <p>4 Q I'll be very brief, then.</p> <p>5 So the deposition process consists of me 09:14:59</p> <p>6 asking you questions and you responding to them</p> <p>7 fully and truthfully.</p> <p>8 Understand?</p> <p>9 A I do.</p> <p>10 Q And from time to time your attorney may 09:15:08</p> <p>11 interpose an objection. The objection is generally</p> <p>12 just to preserve the record, so what you should do</p> <p>13 is let your attorney interpose his objection and</p> <p>14 then answer the question, unless you're instructed</p> <p>15 not to answer for some reason. 09:15:21</p> <p>16 Does that make sense?</p> <p>17 A It does.</p> <p>18 Q We can take a break whenever you need</p> <p>19 during the deposition. And we're not going to be</p> <p>20 going particularly long today. Just let me know if 09:15:31</p> <p>21 you would like a break. The only thing I ask is if</p> <p>22 there is a question pending, that you answer the</p> <p>23 question before we take a break. Okay?</p> <p>24 A Sure.</p> <p>25 Q Everything that is being said at this 09:15:42</p> <p style="text-align: right;">Page 9</p>

<p>1 deposition is being taken down by the court reporter</p> <p>2 in realtime, so we should try not to talk over each</p> <p>3 other to make her job a bit easier today.</p> <p>4 Does that make sense?</p> <p>5 A It does. 09:15:53</p> <p>6 Q And if at any time in the deposition -- I</p> <p>7 guarantee you there will be times that I ask you a</p> <p>8 question that's not clear to you. Please let me</p> <p>9 know and I will try to clarify it for you. Okay?</p> <p>10 A You bet. 09:16:05</p> <p>11 Q The court reporter has placed you under</p> <p>12 oath. You understand that your testimony is being</p> <p>13 given under oath and subject to penalty of perjury,</p> <p>14 just as if you were testifying in a court of law?</p> <p>15 Do you understand that? 09:16:18</p> <p>16 A Yes.</p> <p>17 Q And because of that, it's very important</p> <p>18 that we get your most accurate and full testimony</p> <p>19 today.</p> <p>20 Is there any reason you can't testify 09:16:28</p> <p>21 accurately and fully today?</p> <p>22 A No.</p> <p>23 Q Dr. Schmidt, you mentioned that you're a</p> <p>24 professor at Vanderbilt University.</p> <p>25 Do you have a particular field of 09:16:43</p> <p style="text-align: right;">Page 10</p>	<p>1 number of those different areas that I mentioned</p> <p>2 before.</p> <p>3 Q Would you say that your background in</p> <p>4 software engineering was important to your</p> <p>5 declarations? 09:18:58</p> <p>6 A Certainly software engineering plays a role</p> <p>7 in understanding how almost everything else I do</p> <p>8 related to distributed systems or web-based systems</p> <p>9 or cyber systems, and so on, and mobile Cloud</p> <p>10 computing. My knowledge of software design and 09:19:14</p> <p>11 testing, programming, which is part and parcel of</p> <p>12 software engineering, plays a key part in my</p> <p>13 experience and my expertise in this field -- these</p> <p>14 fields.</p> <p>15 Q Do you teach courses on software 09:19:28</p> <p>16 engineering?</p> <p>17 A I have taught courses on software</p> <p>18 engineering in the past. My current courses focus</p> <p>19 largely again on developing mobile applications in</p> <p>20 Cloud computing environments, and software 09:19:42</p> <p>21 engineering plays a key part in terms of software</p> <p>22 design, software implementation techniques, software</p> <p>23 testing, and quality assurance techniques, software</p> <p>24 processes.</p> <p>25 So pretty much everything I do ultimately 09:19:58</p> <p style="text-align: right;">Page 12</p>
<p>1 expertise?</p> <p>2 A I have a number of areas that I focus on.</p> <p>3 I focus on -- my research focuses on mobile Cloud</p> <p>4 computing, distributed and network systems, cyber</p> <p>5 physical systems, software engineering, distributed 09:17:25</p> <p>6 realtime and embedded systems, machine learning, and</p> <p>7 artificial intelligence, data science.</p> <p>8 And I also teach a number of courses</p> <p>9 related to mobile device programming and accessing</p> <p>10 Cloud services, web services and so on. 09:17:49</p> <p>11 Q That's a long list.</p> <p>12 Dr. Schmidt, which of those fields of</p> <p>13 expertise did you think were applicable to the</p> <p>14 opinions that you issued in your claim construction</p> <p>15 declaration? 09:18:08</p> <p>16 A Well, many of those fields relate to the</p> <p>17 topics that I opine upon here. Certainly topics</p> <p>18 related to distributed and network systems, mobile</p> <p>19 Cloud computing, systems related to software</p> <p>20 engineering, software development, and, in general, 09:18:27</p> <p>21 my knowledge about web-based programming, web</p> <p>22 systems.</p> <p>23 I draw from many of my different fields of</p> <p>24 expertise for declarations in general and reports in</p> <p>25 general. And this particular one, it would be a 09:18:45</p> <p style="text-align: right;">Page 11</p>	<p>1 is based upon my knowledge of effective software</p> <p>2 development, techniques and practices.</p> <p>3 Q Which software languages have you taught in</p> <p>4 your course work?</p> <p>5 A Oh, gosh. Lots. So I've taught -- going 09:20:18</p> <p>6 back to the early days when I was actually a grad</p> <p>7 student, I taught courses in Ada, and Pascal, and C</p> <p>8 and C++.</p> <p>9 And then later when I became a professor, I</p> <p>10 taught courses that related to Java and JavaScript 09:20:38</p> <p>11 and various other scripting languages, very shell</p> <p>12 script languages.</p> <p>13 And I'm probably forgetting a few. I think</p> <p>14 I taught courses using functional programming</p> <p>15 languages and/or functional programming features in 09:20:54</p> <p>16 modern languages, like functional program features</p> <p>17 in C++, functional programming features in Java and</p> <p>18 so on.</p> <p>19 I'm probably leaving a few languages out,</p> <p>20 but I've taught literally hundreds of courses over 09:21:08</p> <p>21 my 35 plus years as a professional, so I've</p> <p>22 encountered lots of different languages.</p> <p>23 MR. KAPLAN: Dr. Schmidt, I'm going to</p> <p>24 introduce another exhibit, which will be the '615</p> <p>25 Patent. 09:21:28</p> <p style="text-align: right;">Page 13</p>

<p>1 Let me know when you see that.</p> <p>2 (Whereupon, Google Exhibit 2 was</p> <p>3 marked for identification by the</p> <p>4 Court Reporter.)</p> <p>5 THE WITNESS: I have successfully 09:21:54</p> <p>6 downloaded that patent.</p> <p>7 BY MR. KAPLAN:</p> <p>8 Q Okay. You're familiar with the '615</p> <p>9 Patent; right?</p> <p>10 A That's correct. 09:22:01</p> <p>11 Q And the declaration that you issued that's</p> <p>12 going to be available, you can download it and refer</p> <p>13 to it as you want. This isn't a memory test.</p> <p>14 But for now, I'm going to be asking you</p> <p>15 about the '615 Patent. Okay? 09:22:16</p> <p>16 A Okay.</p> <p>17 Q I would like you to turn to claim 13 of the</p> <p>18 '615 Patent. For reference, it begins column 19,</p> <p>19 line 48, or so.</p> <p>20 A I'm there. 09:22:43</p> <p>21 Q Okay. You're familiar with claim 13 of the</p> <p>22 '615 Patent?</p> <p>23 A I am.</p> <p>24 Q The first element of claim 13 of the '615</p> <p>25 Patent reads: 09:22:58</p> <p style="text-align: right;">Page 14</p>	<p>1 MR. LEE: Same objection; mischaracterizes.</p> <p>2 THE WITNESS: Depending on the context,</p> <p>3 source code could either be compiled by some kind of</p> <p>4 translator into some lower level formalism typically</p> <p>5 referred to as assembly code or perhaps machine 09:24:40</p> <p>6 code. And under some scenarios, the machine code</p> <p>7 would then be what would be executed by a processor</p> <p>8 directly by the processor or directly as would be</p> <p>9 the case in a normal chip set.</p> <p>10 But, of course, depending on what kind of 09:24:59</p> <p>11 language and what kind of environment, there could</p> <p>12 also be interpreted code, such that the source code</p> <p>13 would be interpreted by some type of interpreter</p> <p>14 which would be running on top of a processor.</p> <p>15 That's why I'm a little confused as to your 09:25:15</p> <p>16 question, what you mean by "source code" in this</p> <p>17 context, since it's a little bit vague as to what</p> <p>18 that term means.</p> <p>19 BY MR. KAPLAN:</p> <p>20 Q Typically machine code rather than source 09:25:24</p> <p>21 code is what is executed by a processor; is that</p> <p>22 fair?</p> <p>23 MR. LEE: Objection to form.</p> <p>24 THE WITNESS: Again, it really depends on</p> <p>25 the context in which you're referring, because you 09:25:35</p> <p style="text-align: right;">Page 16</p>
<p>1 "A tangible nontransitory</p> <p>2 computer readable storage medium,</p> <p>3 including instructions for</p> <p>4 execution by a processor,</p> <p>5 instructions when executed cause 09:23:08</p> <p>6 a control device to implement a</p> <p>7 method comprising."</p> <p>8 Do you see that?</p> <p>9 A I do.</p> <p>10 Q Is source code executable by a processor? 09:23:19</p> <p>11 MR. LEE: Objection to form.</p> <p>12 THE WITNESS: Are you speaking -- what</p> <p>13 level do you mean executable?</p> <p>14 BY MR. KAPLAN:</p> <p>15 Q I'm not sure how to rephrase the question. 09:23:49</p> <p>16 This source code, in its source code form,</p> <p>17 that's readable by a human, executable by a</p> <p>18 processor?</p> <p>19 MR. LEE: Same objection.</p> <p>20 THE WITNESS: It -- 09:24:03</p> <p>21 MR. LEE: Vague and incomplete.</p> <p>22 THE WITNESS: It depends.</p> <p>23 BY MR. KAPLAN:</p> <p>24 Q So source code as it's written by humans is</p> <p>25 executable by a processor? 09:24:18</p> <p style="text-align: right;">Page 15</p>	<p>1 can have hardware -- again, it just depends on the</p> <p>2 context.</p> <p>3 There's no one answer there that covers</p> <p>4 everything in its entirety.</p> <p>5 BY MR. KAPLAN: 09:25:52</p> <p>6 Q So in your view, source code can be</p> <p>7 directly executed by a processor?</p> <p>8 MR. LEE: Objection to form.</p> <p>9 THE WITNESS: Again, I'm not sure what you</p> <p>10 mean by "a processor." But I think I put forth at 09:26:01</p> <p>11 least two different scenarios that are very common,</p> <p>12 one of which is source code in some language such as</p> <p>13 C++ or Java or C or JavaScript or whatnot.</p> <p>14 Could be translated by a compiler into a</p> <p>15 lower level formalism either, again, assembly code 09:26:22</p> <p>16 or machine code and that code could be executed by a</p> <p>17 processor.</p> <p>18 But depending on what kind of processor</p> <p>19 you're referring to, there's also interpreters that</p> <p>20 can execute code in its, quote, "source form." 09:26:35</p> <p>21 So, again, there's no one answer there that</p> <p>22 applies in every situation.</p> <p>23 BY MR. KAPLAN:</p> <p>24 Q For mobile applications distributed through</p> <p>25 IOS or the Android app store, are those executed in 09:26:50</p> <p style="text-align: right;">Page 17</p>

<p>1 source code form?</p> <p>2 MR. LEE: Objection to form, vague,</p> <p>3 incomplete.</p> <p>4 THE WITNESS: Again, we'd have to be more</p> <p>5 specific. 09:27:07</p> <p>6 So there are a whole range of different</p> <p>7 ways of being able to run mobile applications.</p> <p>8 Sometimes we have mobile apps or -- called native</p> <p>9 apps, which are often written in languages like Java</p> <p>10 or Kotlin, for the Android operating platform, or 09:27:24</p> <p>11 Objective-C or, say, Swift for the Apple IOS</p> <p>12 operating platform. That's one way to do things.</p> <p>13 There's other ways you could implement</p> <p>14 mobile applications using scripting languages and</p> <p>15 conceivably possible to write for processors that 09:27:43</p> <p>16 would interpret the programs written in interpreted</p> <p>17 code.</p> <p>18 So I would have to know more specifics</p> <p>19 about the details of a particular platform to give</p> <p>20 you a precise answer that wouldn't leave out certain 09:27:59</p> <p>21 options that are either doable or have been done.</p> <p>22 BY MR. KAPLAN:</p> <p>23 Q In the IOS ecosystem, can you give me an</p> <p>24 example of a program that's distributed through</p> <p>25 IOS -- 09:28:14</p> <p style="text-align: right;">Page 18</p>	<p>1 THE WITNESS: Well, there's a wide range</p> <p>2 of -- what should we call them -- mobile device</p> <p>3 independent programming frameworks and languages,</p> <p>4 such as Unity or PhoneGap or React Native, just to</p> <p>5 list a few, that allow developers to write in other 09:29:52</p> <p>6 languages besides Objective-C and Swift and have</p> <p>7 those apps run in the context of mobile devices.</p> <p>8 BY MR. KAPLAN:</p> <p>9 Q For the file that's downloaded from the</p> <p>10 Apple App Store to the user's device, is that file 09:30:09</p> <p>11 in executable form or does it need to be extracted</p> <p>12 and installed?</p> <p>13 MR. LEE: Objection; foundation, form.</p> <p>14 THE WITNESS: I'm not sure what you mean by</p> <p>15 "extracted." 09:30:26</p> <p>16 BY MR. KAPLAN:</p> <p>17 Q Can a mobile processor within an iPhone</p> <p>18 execute a downloadable from the IOS app store</p> <p>19 without any processing being done to that file?</p> <p>20 MR. LEE: Objection; foundation, form, 09:30:42</p> <p>21 vague, incomplete hypothetical, outside the scope.</p> <p>22 THE WITNESS: You'll have to give me a more</p> <p>23 specific example. I'm not really sure off the top</p> <p>24 of my head.</p> <p>25 /// 09:30:59</p> <p style="text-align: right;">Page 20</p>
<p>1 MR. LEE: Objection; foundation --</p> <p>2 BY MR. KAPLAN:</p> <p>3 Q -- that is executed in source code form, as</p> <p>4 opposed to machine readable code?</p> <p>5 MR. LEE: Objection; foundation, form. 09:28:23</p> <p>6 THE WITNESS: Again, as I was mentioning</p> <p>7 earlier, scripting languages like JavaScript are</p> <p>8 interpreted running on top of various forms of</p> <p>9 virtual or physical machines.</p> <p>10 So they would be an example of something -- 09:28:44</p> <p>11 those types of languages would be examples of things</p> <p>12 where the source code is really what's executed by</p> <p>13 the underlying virtual machine as opposed to being</p> <p>14 compiled down to a lower level.</p> <p>15 BY MR. KAPLAN: 09:29:01</p> <p>16 Q You mentioned programs are generally</p> <p>17 written in Swift and Objective-C that are posted on</p> <p>18 the app store; is that right?</p> <p>19 A I think I said those were native. Native</p> <p>20 apps. It's possible to run applications on IOS that 09:29:11</p> <p>21 are written in other languages besides Swift or</p> <p>22 Objective-C.</p> <p>23 Q Are programs distributed through the app</p> <p>24 store that aren't written in Swift or Objective-C?</p> <p>25 MR. LEE: Objection; foundation. 09:29:28</p> <p style="text-align: right;">Page 19</p>	<p>1 BY MR. KAPLAN:</p> <p>2 Q What more specifics would you need?</p> <p>3 MR. LEE: Objection; form.</p> <p>4 THE WITNESS: I'm just not sure what</p> <p>5 you're -- when you talk about extracted or 09:31:11</p> <p>6 additional processing, I'm not sure what those --</p> <p>7 I'm not sure how you're using those terms.</p> <p>8 BY MR. KAPLAN:</p> <p>9 Q What is the format of an app that's</p> <p>10 downloaded from the Apple App Store? 09:31:21</p> <p>11 MR. LEE: Objection; vague, foundation.</p> <p>12 THE WITNESS: I'm not sure I recall off the</p> <p>13 top of my head.</p> <p>14 BY MR. KAPLAN:</p> <p>15 Q Do you know what the format of an app 09:31:35</p> <p>16 that's downloaded from the Google App Store is</p> <p>17 called?</p> <p>18 MR. LEE: Same objection.</p> <p>19 THE WITNESS: Well, again, if you're</p> <p>20 referring to something like an APK file, that may be 09:31:46</p> <p>21 what you're referring to, but there's lots of</p> <p>22 different pieces there, so I'm not sure if that's</p> <p>23 what you're getting at.</p> <p>24 BY MR. KAPLAN:</p> <p>25 Q What is an APK file? 09:31:56</p> <p style="text-align: right;">Page 21</p>

<p>1 A It's basically a file that describes the</p> <p>2 various components that are necessary to make up an</p> <p>3 application that runs in the context of Google -- of</p> <p>4 Android, really.</p> <p>5 Q Is an APK file executable? 09:32:09</p> <p>6 MR. LEE: Objection; foundation, relevance.</p> <p>7 THE WITNESS: I'm not sure what you mean by</p> <p>8 "executable."</p> <p>9 BY MR. KAPLAN:</p> <p>10 Q Can a processor execute an APK without 09:32:22</p> <p>11 additional processing being done on the APK?</p> <p>12 MR. LEE: Objection; foundation, form,</p> <p>13 compound.</p> <p>14 THE WITNESS: Again, I'm really not sure</p> <p>15 what you're asking. An APK file contains various 09:32:37</p> <p>16 types of components or resources and a -- the Google</p> <p>17 platform, the package manager.</p> <p>18 In fact, portion of that platform uses the</p> <p>19 contents of the APK file. It does processing to it.</p> <p>20 It executes it. 09:32:57</p> <p>21 I think something else jumped in. That</p> <p>22 wasn't me.</p> <p>23 I said the Google package manager -- I'm</p> <p>24 sorry -- the Android package manager is the -- one</p> <p>25 of the various pieces of the Android platform that 09:33:16</p> <p style="text-align: right;">Page 22</p>	<p>1 MR. LEE: Objection to form, foundation.</p> <p>2 Once again, Marc, this is really nothing to</p> <p>3 do with claim construction, his declaration that</p> <p>4 we're here for. You can get this from your expert</p> <p>5 if you want. 09:34:32</p> <p>6 But I just don't see that this is part of</p> <p>7 his declaration. In fact, you have the exhibits</p> <p>8 marked and the questions don't relate to it at all.</p> <p>9 You can answer.</p> <p>10 THE WITNESS: You have to explain what 09:34:44</p> <p>11 you mean by "execute" and what's doing the</p> <p>12 execution, how does that execution differ from the</p> <p>13 previous steps required from an APK file.</p> <p>14 I'm sort of at a loss for understanding the</p> <p>15 context of the question. 09:34:56</p> <p>16 BY MR. KAPLAN:</p> <p>17 Q If you can't answer, that's okay. If you</p> <p>18 need more information, let me know.</p> <p>19 A The terms you're using, execute -- execute</p> <p>20 by what? I don't know what's doing the execution. 09:35:12</p> <p>21 Q This is going to be my last question on</p> <p>22 this topic, but as we were just discussing, there's</p> <p>23 an APK download that was installed and then the</p> <p>24 question was simply: Can it be executed by the</p> <p>25 device? 09:35:34</p> <p style="text-align: right;">Page 24</p>
<p>1 uses the APK file -- the contents of the APK file to</p> <p>2 install an application -- a native application.</p> <p>3 There's other ways of installing and</p> <p>4 running applications on an Android or global device</p> <p>5 besides that, but that's one way to do it. 09:33:34</p> <p>6 BY MR. KAPLAN:</p> <p>7 Q And after the native application is</p> <p>8 installed, can it be executed?</p> <p>9 MR. LEE: Objection; form, foundation,</p> <p>10 relevance. 09:33:41</p> <p>11 You know, Marc, I let this go a little bit,</p> <p>12 but we're really here to talk about claim</p> <p>13 construction and his declaration, I thought, and I'm</p> <p>14 not really sure how any of this relates. It's</p> <p>15 outside the scope. 09:33:51</p> <p>16 Sounds like you may have some other</p> <p>17 infringement questions you're trying to get to, but</p> <p>18 I think that would be improper here.</p> <p>19 Try to get back to his declaration or some</p> <p>20 of the exhibits you marked. 09:34:03</p> <p>21 BY MR. KAPLAN:</p> <p>22 Q You can answer.</p> <p>23 A Can you repeat the question, please?</p> <p>24 Q It was for the native application that is</p> <p>25 installed, that can be executed; right? 09:34:19</p> <p style="text-align: right;">Page 23</p>	<p>1 A Under what set of assumptions?</p> <p>2 Q Are there assumptions necessary?</p> <p>3 A Sure.</p> <p>4 Q Tell me what assumptions you think are</p> <p>5 necessary. 09:35:54</p> <p>6 MR. LEE: Objection to the form.</p> <p>7 THE WITNESS: It's the -- there's so many</p> <p>8 assumptions that are required there.</p> <p>9 Is it actually a validate APK file?</p> <p>10 Is this a user of the device? 09:36:05</p> <p>11 If there's a user of the device, does the</p> <p>12 user actually want to launch whatever was</p> <p>13 downloaded?</p> <p>14 Those are all things.</p> <p>15 Another thing that's still not clear from 09:36:14</p> <p>16 the scope of your question is: What does it mean to</p> <p>17 execute by the device?</p> <p>18 What's doing the execution?</p> <p>19 Earlier you asked me about -- appeared like</p> <p>20 you were asking about a processor, but now it sounds 09:36:25</p> <p>21 like you're talking about a device.</p> <p>22 Is the device hardware?</p> <p>23 Is the device software?</p> <p>24 There's so many parts to the hypothetical</p> <p>25 you're putting forth there, so I need to understand 09:36:35</p> <p style="text-align: right;">Page 25</p>

<p>1 more thoroughly what it is you're putting forth in</p> <p>2 the hypothetical to be able to give an answer that</p> <p>3 wouldn't just be a wild guess.</p> <p>4 (Speaking simultaneously.)</p> <p>5 THE REPORTER: I'm sorry. You were 09:36:52</p> <p>6 speaking over each other.</p> <p>7 MR. LEE: I didn't realize you were</p> <p>8 talking, Marc.</p> <p>9 Go ahead.</p> <p>10 BY MR. KAPLAN: 09:36:58</p> <p>11 Q Let's move to the second element in claim</p> <p>12 13 which begins:</p> <p>13 "Causing a graphical</p> <p>14 interface to display a control</p> <p>15 interface including one or more 09:37:05</p> <p>16 transport controls to control</p> <p>17 playback by the control device."</p> <p>18 Do you see that?</p> <p>19 A I do.</p> <p>20 Q Do you have an understanding of what this 09:37:15</p> <p>21 claim element means?</p> <p>22 MR. LEE: Objection; form, foundation,</p> <p>23 relevance.</p> <p>24 I don't think this is part of his</p> <p>25 declaration. 09:37:25</p> <p style="text-align: right;">Page 26</p>	<p>1 the link that's provided in the Exhibit Share, it</p> <p>2 doesn't work at all.</p> <p>3 Q So if you click the link -- I see.</p> <p>4 Give me a moment.</p> <p>5 It's funny. I have one version of the 09:39:55</p> <p>6 patent in Exhibit Share that is searchable and one</p> <p>7 version that isn't now, so I understand your issues.</p> <p>8 I think, Dr. Schmidt, if you right click</p> <p>9 the document and download it --</p> <p>10 A Yeah, that's what I've done. I've 09:40:12</p> <p>11 downloaded it.</p> <p>12 Q It's not searchable after you do that?</p> <p>13 A No. I mean, it's very weird. I have</p> <p>14 like -- I'm -- I downloaded my exhibit -- my</p> <p>15 declaration, sorry, my claim construction 09:40:30</p> <p>16 declaration, and that's searchable quite well. I</p> <p>17 can search that no problem.</p> <p>18 Q Huh. Hmm.</p> <p>19 So when you downloaded the '615 Patent</p> <p>20 natively to your desktop, it's not searchable when 09:40:45</p> <p>21 you open it in Adobe or Chrome?</p> <p>22 A Yeah. No. It's weird.</p> <p>23 Right now I'm searching on transport and</p> <p>24 it's highlighting the word "on" in the middle of</p> <p>25 claim 9, and so it's like now I click on "next" and 09:41:00</p> <p style="text-align: right;">Page 28</p>
<p>1 You can answer, if you can.</p> <p>2 THE WITNESS: I do understand what the</p> <p>3 claim element means, yes.</p> <p>4 BY MR. KAPLAN:</p> <p>5 Q What are transport controls? 09:37:41</p> <p>6 A Let's go look.</p> <p>7 As has been noted a number of times, I</p> <p>8 think that is probably not something that was part</p> <p>9 of my declaration, so I will have to go through and</p> <p>10 read the spec to see if I can find it. 09:38:01</p> <p>11 This file doesn't appear to be searchable,</p> <p>12 so this is going to take a very long time. I have</p> <p>13 to read through the entire patent, since the file</p> <p>14 you've given me is not searchable.</p> <p>15 Q That's weird. It's searchable on my side. 09:38:30</p> <p>16 A When I search for "transport," it doesn't</p> <p>17 find anything.</p> <p>18 Q Did you download the file or are you</p> <p>19 looking at it in -- on the Exhibit Share website?</p> <p>20 A I did download it. 09:38:53</p> <p>21 Let me try to look for it in the Exhibit</p> <p>22 Share.</p> <p>23 Q I'm looking at it on the website. It's OCR</p> <p>24 for me.</p> <p>25 A Yeah. I'm unable -- when I just click on 09:39:09</p> <p style="text-align: right;">Page 27</p>	<p>1 now it's highlighting the word "playback."</p> <p>2 For some reason there's something wrong</p> <p>3 with that PDF. It's probably something wrong with</p> <p>4 the PDF file, I guess.</p> <p>5 Is there another way to get the '615 09:41:20</p> <p>6 Patent?</p> <p>7 Q I mean, it's not ideal, but you could go to</p> <p>8 Google patents and download it yourself from that</p> <p>9 website.</p> <p>10 A Let me try that, if you don't mind. 09:41:33</p> <p>11 Q I'll probably have to ask you a couple</p> <p>12 questions to make sure you're looking at the same</p> <p>13 document, but this is just the nature of online</p> <p>14 depositions these days, I suppose.</p> <p>15 A Let me see if I can -- what is it, 9967615? 09:41:47</p> <p>16 I think that's the right one.</p> <p>17 The patent's name is "Networked Music</p> <p>18 Playback"; is that right?</p> <p>19 Q Correct.</p> <p>20 A Good. That part looks good so far. 09:42:03</p> <p>21 That is so weird.</p> <p>22 Q That doesn't work either, downloading it</p> <p>23 from Google?</p> <p>24 A That's the same problem. Exactly the same</p> <p>25 problem. 09:42:27</p> <p style="text-align: right;">Page 29</p>

<p>1 Q I just did it on my computer and I can 2 search it, so --</p> <p>3 A Let me ask another -- is it the case that 4 the specification for the '033 Patent is the same as 5 the one for the '615? 09:42:42</p> <p>6 Q I believe they're the same.</p> <p>7 A Because I have a copy of the '033 Patent 8 that seems to be searchable. I have no idea why.</p> <p>9 Q Well, we can use the '033 Patent, that's 10 fine. 09:43:00</p> <p>11 A Okay. Let's do that. It won't have all 12 the same claims, but we can probably find those 13 other ways.</p> <p>14 Q Right.</p> <p>15 MR. KAPLAN: Let me introduce the '033 09:43:06 16 Patent as an exhibit and I'll ask some questions to 17 make sure we're looking at the same document, even 18 though you're using your version.</p> <p>19 Is that okay?</p> <p>20 THE WITNESS: Okay. That's fine. 09:43:17</p> <p>21 MR. KAPLAN: I've introduced as Exhibit 3, 22 U.S. Patent number 10779033.</p> <p>23 THE WITNESS: All right.</p> <p>24 ///</p> <p>25 /// 09:44:09</p> <p style="text-align: right;">Page 30</p>	<p>1 Q In claim 13, there's a claim term 2 "multimedia content."</p> <p>3 Do you see that?</p> <p>4 A I do.</p> <p>5 Q Do you have an understanding of what 09:45:57 6 multimedia content means in the context of the '615 7 Patent?</p> <p>8 MR. LEE: Calls for a legal conclusion.</p> <p>9 You can answer, if you can.</p> <p>10 THE WITNESS: Let me just take a quick look 09:46:16 11 and see if I discuss that in my declaration. 12 So let's see. Let me see if I can point 13 you -- well, if you take a look at my claim 14 construction declaration, paragraph 33, page 10, I 15 mention a description of -- I'm summarizing the '615 09:46:52 16 Patent, and its description at a local playback 17 system.</p> <p>18 And it talks about how the local playback 19 system is capable of playing back multimedia 20 content, such as audio. I think that's the first 09:47:09 21 sentence in paragraph 33. It gives a bunch of 22 references to '615 Patent for various portions 23 describing that.</p> <p>24 So if we go back to the patent that I can 25 now search, then -- let me find something real quick 09:47:30</p> <p style="text-align: right;">Page 32</p>
<p>1 (Whereupon, Google Exhibit 3 was 2 marked for identification by the 3 Court Reporter.)</p> <p>4 BY MR. KAPLAN:</p> <p>5 Q Do you see that exhibit? 09:44:11</p> <p>6 A It's loading. It should be there 7 momentarily.</p> <p>8 Q Now, given the searching issues, 9 Dr. Schmidt, can you confirm that the version of the 10 '033 Patent that you're looking at is the same as 09:44:21 11 the '033 Patent that I introduced as Exhibit 3?</p> <p>12 A I'm actually using the version that you 13 just put up there.</p> <p>14 Q Okay.</p> <p>15 A And it works fine. Go figure. I can 09:44:33 16 search that one.</p> <p>17 So the good news is, I can read the claims 18 from '615, but I can search in the '033. I think 19 between those two things we should be fine.</p> <p>20 Q Okay. So I'm going to ask you a slightly 09:45:04 21 different question. Let's just turn back to the 22 '615 Patent.</p> <p>23 A Okay. I'm there.</p> <p>24 Q If you go to claim 13.</p> <p>25 A I'm there. 09:45:27</p> <p style="text-align: right;">Page 31</p>	<p>1 here.</p> <p>2 (Document reviewed by the witness.)</p> <p>3 THE WITNESS: So in reading through the 4 patent spec, it makes it clear that audio is an 5 example of multimedia content. 09:48:40</p> <p>6 BY MR. KAPLAN:</p> <p>7 Q And what is an example of audio that would 8 be multimedia content?</p> <p>9 A Well, if you take a look on paragraph 47 of 10 my declaration, it mentions a single song would be 09:49:26 11 an example of multimedia content. I give other 12 examples of other things it can be. Multimedia 13 content as well.</p> <p>14 It says: Single song, a video, particular 15 Internet radio station, a user defined playlist with 09:49:44 16 multiple songs or videos, a service defined playlist 17 of multiple songs, videos, and album of songs, 18 et cetera.</p> <p>19 Q And how would one identify that a person 20 was looking at a single song? 09:50:06</p> <p>21 MR. LEE: Objection to form.</p> <p>22 THE WITNESS: I'm sorry. I don't 23 understand your question, what does it mean to look 24 at a single song?</p> <p>25 /// 09:50:21</p> <p style="text-align: right;">Page 33</p>

<p>1 BY MR. KAPLAN:</p> <p>2 Q What are the -- you said a single song as</p> <p>3 an example of multimedia content; is that fair?</p> <p>4 A That's one example, yes.</p> <p>5 Q And how do I know that I'm looking at a 09:50:30</p> <p>6 single song which is an example of multimedia</p> <p>7 content?</p> <p>8 MR. LEE: Objection to form, vague.</p> <p>9 THE WITNESS: In what context?</p> <p>10 BY MR. KAPLAN: 09:50:47</p> <p>11 Q Like what other characteristics of the</p> <p>12 single song that we're talking about which is an</p> <p>13 example of multimedia content?</p> <p>14 MR. LEE: Objection to form; vague, and</p> <p>15 confusing. 09:51:02</p> <p>16 THE WITNESS: I guess I don't understand</p> <p>17 when you say "looking." Looking at a -- looking at</p> <p>18 audio. What does that mean by "looking at it"?</p> <p>19 Are you referring to some kind of user</p> <p>20 interface? 09:51:14</p> <p>21 Are you referring to looking at a thumb</p> <p>22 drive that contains the contents?</p> <p>23 What does it mean to look at a song in the</p> <p>24 way you're asking the question?</p> <p>25 /// 09:51:26</p> <p style="text-align: right;">Page 34</p>	<p>1 BY MR. KAPLAN:</p> <p>2 Q Would an Mp3 file of Drake's newest hit be</p> <p>3 an example of a single song in this context?</p> <p>4 MR. LEE: Objection; foundation.</p> <p>5 THE WITNESS: I'm not familiar with Drake's 09:52:50</p> <p>6 latest hit, but one -- there's many different ways</p> <p>7 to represent audio content. And Mp3 files are one</p> <p>8 way to represent audio content.</p> <p>9 BY MR. KAPLAN:</p> <p>10 Q Are there any other ways that you could 09:53:03</p> <p>11 represent audio content that you're aware of?</p> <p>12 A Sure.</p> <p>13 Q What are those?</p> <p>14 A There's other formats besides Mp3. There's</p> <p>15 other formats besides digital formats that can be 09:53:20</p> <p>16 used to represent audio content.</p> <p>17 Q What's an example of a format that's not</p> <p>18 digital format that could be used to represent audio</p> <p>19 content?</p> <p>20 A In what context? 09:53:41</p> <p>21 Q I thought you just said that you could</p> <p>22 represent audio in the digital context, for example,</p> <p>23 with an Mp3 or you could represent it in the</p> <p>24 non-digital context; is that --</p> <p>25 A That is correct. That is correct. 09:53:56</p> <p style="text-align: right;">Page 36</p>
<p>1 BY MR. KAPLAN:</p> <p>2 Q What would be an example of a single song</p> <p>3 that would meet your definition of audio?</p> <p>4 A Again, in what context are you asking?</p> <p>5 Q You said that a single song is an example 09:51:41</p> <p>6 of audio, which is an example of multimedia content;</p> <p>7 right?</p> <p>8 A I believe I said something along those</p> <p>9 lines, but I'm trying to understand what -- I'm</p> <p>10 trying to understand what you're asking me, the 09:51:57</p> <p>11 context in which you're asking me.</p> <p>12 Are you asking -- sorry. Go ahead.</p> <p>13 Q Well, so a single song is an example of</p> <p>14 audio which is an example of multimedia content and</p> <p>15 my question is: What's an example of a single song? 09:52:08</p> <p>16 MR. LEE: Objection to form.</p> <p>17 THE WITNESS: Again, I'm not sure I</p> <p>18 understand in what context you're asking me, what's</p> <p>19 an example.</p> <p>20 You're asking me to name songs or are you 09:52:23</p> <p>21 asking me to name formats that you could use to play</p> <p>22 songs back, be they electronic or magnetic or some</p> <p>23 other media?</p> <p>24 I'm not sure I understand the context of</p> <p>25 the question. 09:52:37</p> <p style="text-align: right;">Page 35</p>	<p>1 Q What would be an example of a non-digital</p> <p>2 context?</p> <p>3 A A 45 record from back in the day.</p> <p>4 Q Okay. Multimedia content playback is</p> <p>5 referred to the specification of the '615 Patent and 09:54:22</p> <p>6 the '033 Patent.</p> <p>7 Do you understand that?</p> <p>8 A I see the specification for the '033 and</p> <p>9 '615 Patent includes the phrase "multimedia</p> <p>10 playback," yes, I see that. 09:54:56</p> <p>11 Q I was actually looking at "multimedia</p> <p>12 content playback."</p> <p>13 Do you see that, too?</p> <p>14 A I see several references to "multimedia</p> <p>15 content playback" -- 09:55:28</p> <p>16 Q What would -- sorry. Go ahead.</p> <p>17 A -- in the specification.</p> <p>18 Q Okay. What would be an example of</p> <p>19 multimedia content playback?</p> <p>20 A The way I see the phrase used in the 09:55:40</p> <p>21 specification appears, at least in column 2,</p> <p>22 starting on line 23 where it refers to a "multimedia</p> <p>23 content playback," and inside parenthesis it then</p> <p>24 says, "EG Sonos TM," and then it says "system."</p> <p>25 Q Does multimedia content playback just mean 09:56:15</p> <p style="text-align: right;">Page 37</p>

<p>1 playback of the multimedia content we were just 2 discussing?</p> <p>3 A I don't believe I've rendered an opinion on 4 that. I would have to take a closer look to see how 5 that particular term is used, but I don't believe 09:56:32 6 I've rendered an opinion on the meaning of 7 "multimedia content."</p> <p>8 Let me take a look before I say that. Let 9 me take a look and see what I said, if I said 10 anything. 09:56:44 11 (Document reviewed by the witness.)</p> <p>12 THE WITNESS: I don't think I -- I don't 13 think my declaration, unless I may need to read 14 through it more carefully, but off the top of my 15 head, I don't think it talks about the phrase 09:57:07 16 "multimedia content playback."</p> <p>17 I would have to take a more careful look to 18 see what that term means before I render an opinion 19 on it.</p> <p>20 BY MR. KAPLAN: 09:57:19</p> <p>21 Q Can I turn your attention back to claim 13 22 of the '615 Patent.</p> <p>23 A I'm there.</p> <p>24 Q Okay. Under -- I'm going to call it 25 element A, which is roughly halfway down in the 09:57:34 Page 38</p>	<p>1 "providing a location." 2 BY MR. KAPLAN:</p> <p>3 Q Does the resource locator have to provide a 4 location to meet this claim element?</p> <p>5 MR. LEE: Objection to form, calls for a 09:59:14 6 legal conclusion, scope.</p> <p>7 THE WITNESS: I would have to read through 8 the specification more carefully to get a sense of 9 how resource locator relates to providing a 10 location, but what my understanding here as the 09:59:34 11 claim is written, resource locator is the phrase 12 corresponding to mean associated with or related to. 13 So it doesn't look to me like it 14 necessarily has to provide a location directly. It 15 just needs to be able to be associated with 09:59:51 16 locations and there's many different ways to do 17 that, above and beyond providing a particular 18 location of a resource.</p> <p>19 BY MR. KAPLAN:</p> <p>20 Q Is there a difference in your mind between 10:00:17 21 the resource locator being associated with the 22 location versus related to a location?</p> <p>23 MR. LEE: Objection to form.</p> <p>24 THE WITNESS: I think those are largely 25 synonymous. 10:00:30 Page 40</p>
<p>1 claim 13. 2 Do you see that?</p> <p>3 A I think so.</p> <p>4 Q The -- towards the end of paragraph A, the 5 claim reads: 09:57:56 6 "Corresponding to respective 7 locations of a multimedia 8 content."</p> <p>9 Do you see that?</p> <p>10 A I do. 09:58:04</p> <p>11 Q Do you have an understanding of what that 12 means?</p> <p>13 A Yes.</p> <p>14 Q What does it mean?</p> <p>15 A So in the context of what it's describing, 09:58:12 16 it's explaining how there's one or more resource 17 locators that are corresponding to respective 18 locations of the multimedia content.</p> <p>19 So my understanding of corresponding to in 20 this context would be something akin to associated 09:58:31 21 with or related to.</p> <p>22 Q Is the resource locator providing a 23 location?</p> <p>24 MR. LEE: Objection to form.</p> <p>25 THE WITNESS: I'm not sure what you mean by 09:59:01 Page 39</p>	<p>1 BY MR. KAPLAN:</p> <p>2 Q Is it fair to say that, in your view, the 3 resource locator doesn't have to provide a location?</p> <p>4 MR. LEE: Objection to form.</p> <p>5 THE WITNESS: Well, I describe this topic 10:00:59 6 in my claim construction declaration in several 7 places, one of which is in paragraph 1 of 1, and I 8 describe what my understanding that a POSITA would 9 have had at the time of the invention, which is that 10 it would be a resource locator, generally refers to 10:01:22 11 information that enables the device to access a 12 resource or be associated with or related to a 13 resource.</p> <p>14 And I mention that that information could 15 take various forms. It could take the form of some 10:01:33 16 kind of identifier, such as maybe a key in a 17 database, for example, an address perhaps in memory. 18 It could be a uniform resource indicator, which is 19 different from a Uniform Resource Locator.</p> <p>20 It could be other things that facilitate 10:01:53 21 some means by which a device could access a 22 resource. And there's many, many other ways of 23 doing it beyond the ones I listed there. Those are 24 just some of the ones that would be obvious, but 25 there's other ones that could be used, things like 10:02:08 Page 41</p>

<p>1 object references or monikers or UUIDs. There's a 2 whole bunch of different ways to identify a 3 resource. 4 So some of those would involve addresses, 5 some addresses in the sense of, say, an IP address 10:02:23 6 or a port number in the Internet, but many other 7 ways of being able to identify resources that would 8 not require addresses. 9 In fact, it's even possible to use URLs 10 that don't encode an address in them by using a 10:02:39 11 concept of persistent URL, which is really more of 12 an access to a locator service as opposed to 13 directly encoding the address into the URL itself. 14 BY MR. KAPLAN: 15 Q Would a song name correspond to a location 10:02:53 16 of that song? 17 MR. LEE: Objection to form. 18 THE WITNESS: Depends quite a bit on how 19 the lookup model would work. So it depends on the 20 context, it depends on the use case. 10:03:13 21 BY MR. KAPLAN: 22 Q So a song might correspond to a location of 23 another resource or it might not; is that right? 24 A Again, it depends on the implementation and 25 the way in which the data models and data stores are 10:03:28 Page 42</p>	<p>1 generally refers to some kind of information which 2 could be many different forms. 3 It could take the form of identifiers or 4 addresses, or URIs, URLs, object references, 5 whatever -- whatever is needed to be able to 10:05:14 6 un-ambiguously associate that resource locator with 7 the actual resource that's of interest. 8 BY MR. KAPLAN: 9 Q So let me give you an example. I'm on 10 iTunes. I download an Mp3 of my favorite artist. 10:05:31 11 Are you with me so far? 12 A Okay. 13 Q I've got the Mp3 stored on my own computer 14 and I play it from time to time. Okay? 15 A Okay. 10:05:47 16 Q In that hypothetical, would the song name 17 correspond to a location of where the song is 18 stored? 19 MR. LEE: Objection to form, foundation, 20 incomplete. 10:06:03 21 THE WITNESS: When you say "song name," I'm 22 not quite sure I understand how you're using the 23 term "song name." 24 BY MR. KAPLAN: 25 Q So when I downloaded the song from iTunes, 10:06:12 Page 44</p>
<p>1 managed. 2 Q So a song name might correspond to a 3 location of a resource, just depending on how the 4 system is architected; is that right? 5 A I wouldn't quite use those terms, but 10:03:47 6 depending on how the data model or the data 7 management portion of the system is structured, 8 there's various ways of being able to identify 9 resources. An identifier could be used. The 10 identifier conceivably could be the name of the 10:04:04 11 song. That could be one way to do it, depending on 12 how the data model and the database -- or the data 13 management system is constructed. 14 Might not be the most efficient way of 15 doing it in terms of minimizing footprint, but 10:04:18 16 that's really just an encoding question. 17 Q So as long as there's a way to translate 18 between the song name and its address, would the 19 song be corresponding to a location of the song? 20 MR. LEE: Objection to form. 10:04:42 21 THE WITNESS: Again, I would have to 22 understand a little bit better about what you mean 23 by some of those terms, but as I describe here in 24 paragraph 1 of 1 of my claim construction 25 declaration, the concept of resource locator 10:04:58 Page 43</p>	<p>1 I saved it as "Drake's new hit" and that's the song 2 name. 3 MR. LEE: Objection to form. Same 4 objection. 5 THE WITNESS: So depends on a whole bunch 10:06:28 6 of different other factors as to whether that song 7 name would be the resource locator. 8 BY MR. KAPLAN: 9 Q So in my hypothetical, after I downloaded 10 the song from iTunes and saved it as Drake's song in 10:06:45 11 my computer, it's possible, in your view, that the 12 song name would correspond to the location of the 13 song? 14 A Again, I would have to -- there's so many 15 different pieces of your hypothetical that I don't 10:07:03 16 quite understand yet, so it's hard to be able to 17 answer that question. 18 Q What other information can I give you that 19 will allow you to answer the question? 20 A So where did you store the file? 10:07:15 21 Are you -- are you -- 22 Q I'm sorry. Let me take it one by one. 23 I stored it on my desktop. 24 A And in what did you -- what specifically 25 was the name that you used? 10:07:35 Page 45</p>

<p>1 Q "New hit song" was the name of the file.</p> <p>2 A Does the file have a file extension?</p> <p>3 Q Dot Mp3.</p> <p>4 A Okay. Are there spaces or hyphens?</p> <p>5 Q There are spaces. 10:07:58</p> <p>6 A So if I understand your question -- or your</p> <p>7 hypothetical, rather, if there was a file in some</p> <p>8 folder in your -- or in your desktop -- say, in your</p> <p>9 desktop, there's a file that has a name that is</p> <p>10 "Drake's new hit song" dot Mp3, then were you to 10:08:24</p> <p>11 click on that in your finder or file Explorer, or</p> <p>12 whatever desktop you're using, then that would</p> <p>13 cause -- assuming that everything was configured</p> <p>14 properly in your operating system, that would cause</p> <p>15 the appropriate media player to be launched to play 10:08:48</p> <p>16 that song.</p> <p>17 So this is the part I'm a little confused</p> <p>18 on. Is the name of the song, what's associated?</p> <p>19 Well, there's a way to be able to launch it and this</p> <p>20 is just straightforward from using a file browser on 10:09:05</p> <p>21 a desktop computer or laptop or whatever.</p> <p>22 You're simply launching something that has</p> <p>23 a name and that is associated with the content</p> <p>24 that's being played.</p> <p>25 Q So is your answer yes, the name of the file 10:09:24</p> <p style="text-align: right;">Page 46</p>	<p>1 say here in paragraph 101 of my claim construction</p> <p>2 declaration, that a resource locator generally</p> <p>3 refers to information that enables a device to</p> <p>4 access a resource and that that information could</p> <p>5 take various forms, such as an identifier, an 10:11:24</p> <p>6 address, a URI, a URL, and so on.</p> <p>7 And so the name of a file -- or I guess</p> <p>8 more specifically here, the ability provided by a</p> <p>9 file browser on a modern computer to be able to</p> <p>10 click on the name of something that has an 10:11:44</p> <p>11 application associated with it, that's a form of an</p> <p>12 identifier. That could then be able to facilitate a</p> <p>13 device accessing your resource.</p> <p>14 Q Let me add to the hypothetical.</p> <p>15 So we've got the song stored on the 10:12:06</p> <p>16 desktop. The file name is New Hit Song.</p> <p>17 Within that file there's metadata</p> <p>18 identifying the name of the song, which is going to</p> <p>19 be A1 for purposes of the hypothetical.</p> <p>20 Do you follow so far? 10:12:23</p> <p>21 A I think so.</p> <p>22 Q Would A1 be -- strike that.</p> <p>23 Would A1 correspond to the location of the</p> <p>24 file?</p> <p>25 MR. LEE: Objection to form, incomplete. 10:12:37</p> <p style="text-align: right;">Page 48</p>
<p>1 would correspond to the location?</p> <p>2 A Well --</p> <p>3 MR. LEE: Objection to form.</p> <p>4 THE WITNESS: -- the way I would -- again,</p> <p>5 there's lots of different ways to look at that, but 10:09:38</p> <p>6 in that particular situation, I was simply</p> <p>7 explaining how if you have a file on the desktop</p> <p>8 computer and you launch the file and the file has</p> <p>9 the appropriate suffix that's understood by the</p> <p>10 system and the system knows how to launch the 10:09:59</p> <p>11 appropriate app to properly do something with</p> <p>12 whatever it is you're launching, that that will</p> <p>13 cause it to be launched.</p> <p>14 As to how that relates to the original</p> <p>15 topic we were discussing, which is from element A in 10:10:19</p> <p>16 claim 13 in the '615 Patent, that was describing</p> <p>17 resource locators that correspond to respective</p> <p>18 locations of multimedia content.</p> <p>19 So topping off the stack a couple layers,</p> <p>20 the name of the file could be one way to associate 10:10:44</p> <p>21 or locate the multimedia content.</p> <p>22 BY MR. KAPLAN:</p> <p>23 Q So in the hypothetical, the name of the</p> <p>24 file could be a resource locator?</p> <p>25 A Well, I think that's consistent with what I 10:11:00</p> <p style="text-align: right;">Page 47</p>	<p>1 THE WITNESS: I don't understand what you</p> <p>2 mean.</p> <p>3 BY MR. KAPLAN:</p> <p>4 Q We have a song that has been downloaded.</p> <p>5 It has a file name. It also has within the 10:12:51</p> <p>6 metadata, some name information.</p> <p>7 And my question is whether that name</p> <p>8 information corresponds to the location of the file?</p> <p>9 MR. LEE: Same objection.</p> <p>10 THE WITNESS: Yeah. I would have to look 10:13:08</p> <p>11 more carefully into the way in which that</p> <p>12 information be stored. I don't know off the top of</p> <p>13 my head. I would have to look into it in more</p> <p>14 detail to see.</p> <p>15 I'm also not sure what name you're 10:13:18</p> <p>16 referring to in the metadata either.</p> <p>17 BY MR. KAPLAN:</p> <p>18 Q On that last point, are you aware that</p> <p>19 files can be associated with metadata?</p> <p>20 A Files can be associated -- in what context? 10:13:38</p> <p>21 Q Well, if you download an Mp3, are you aware</p> <p>22 that programs can pull out metadata from that file</p> <p>23 to identify, for example, artist and song name?</p> <p>24 A Yes.</p> <p>25 Q So in this example, I'm asking whether the 10:14:08</p> <p style="text-align: right;">Page 49</p>

<p>1 song name metadata corresponds to the location of 2 the file?</p> <p>3 MR. LEE: Objection to form, incomplete 4 hypothetical.</p> <p>5 THE WITNESS: I am -- I would have to look 10:14:18 6 more carefully into the way in which the Mp3 format 7 stores name information to see what the relationship 8 is, if any, between metadata associated with the 9 name of the song and the location of the song to be 10 able to answer that question precisely. 10:14:34</p> <p>11 BY MR. KAPLAN:</p> <p>12 Q What would be the ways in which it was 13 stored where it would correspond to the location of 14 the file?</p> <p>15 MR. LEE: Objection to form. 10:14:48</p> <p>16 THE WITNESS: Again, without knowing more 17 about the way -- the specific detail about how Mp3 18 stores names in metadata, I would have to look at 19 that in more detail to know.</p> <p>20 BY MR. KAPLAN: 10:15:07</p> <p>21 Q I'm trying to ask a question and maybe the 22 answer is I don't know, but I want to make sure the 23 question is clear.</p> <p>24 What I'm trying to ask is: What would be 25 the instances where you would say yes, that main 10:15:15 Page 50</p>	<p>1 BY MR. KAPLAN:</p> <p>2 Q Dr. Schmidt, welcome back.</p> <p>3 A Thank you.</p> <p>4 Q Do you understand you're still under oath?</p> <p>5 A Yes. 10:28:33</p> <p>6 Q Did you have any discussions with your 7 attorneys about the substance of your testimony 8 during the break?</p> <p>9 A No.</p> <p>10 Q Let's turn to paragraph 47 of your claim 10:28:41 11 construction declaration, which is Exhibit 1.</p> <p>12 A I'm there.</p> <p>13 Q In this first sentence in paragraph 47, you 14 wrote that:</p> <p>15 "POSITA would have understood 10:29:14 16 that a 'playlist queue' is, in 17 more of a colloquial sense, a 18 'container' that can hold 19 multimedia for playback and that 20 different types and arrangements 10:29:28 21 of multimedia could be queued," 22 and it goes on from there. 23 Do you see that? 24 You put "container" in quotes there. 25 What does "container" mean for you in this 10:29:39 Page 52</p>
<p>1 metadata information does correspond to the location 2 of the file?</p> <p>3 MR. LEE: Objection to form.</p> <p>4 THE WITNESS: Again, I would have to look 5 more deeply into the specifics of how metadata is 10:15:30 6 stored in Mp3 in order to know what relationship, if 7 any, there would be between metadata that's stored 8 in Mp3 file associated with name and any location 9 relevance, or not, that there might be, so I just 10 don't know that off the top of my head. 10:15:50</p> <p>11 I would prefer not to speculate on that 12 because I would just be making a guess. And in 13 order to do a proper analysis, I would have to look 14 more carefully how it's stored.</p> <p>15 MR. LEE: Marc, I think we've been going 10:16:02 16 about an hour.</p> <p>17 Is this a good time for a break?</p> <p>18 MR. KAPLAN: I'm happy to take a break.</p> <p>19 THE VIDEOGRAPHER: We're off the record at 20 10:16 a.m. 10:16:10</p> <p>21 (Whereupon, a recess was held 22 from 10:16 a.m. to 10:28 a.m.)</p> <p>23 THE VIDEOGRAPHER: We're on the record at 24 10:28 a.m.</p> <p>25 /// 10:28:28 Page 51</p>	<p>1 context?</p> <p>2 A It's basically the data construct of some 3 kind, as I say in the rest of the sentence, can be 4 used to hold multimedia or media content for 5 playback. 10:29:56</p> <p>6 Q Is there a difference between a data 7 construct and a data structure?</p> <p>8 A Depends on the context.</p> <p>9 Q Let's start with what you understand both 10 to mean. 10:30:16</p> <p>11 So what is a data construct to you?</p> <p>12 A Well, I give examples of data constructs in 13 paragraph 58, a little bit further down from 14 paragraph 47 that we were just discussing, and I 15 gave examples of data constructs. 10:30:39</p> <p>16 So a single data variable would be an 17 example of a data construct. Multiple data 18 variables would be an example of a data construct.</p> <p>19 A data array, those would be -- that would be 20 another example of a data construct. 10:30:55</p> <p>21 It's some way of arranging data, one or 22 more datum or data.</p> <p>23 Q For the multiple data variables that would 24 be a data construct to you, would there need to be a 25 relationship between those multiple data variables 10:31:20 Page 53</p>

<p>1 or not?</p> <p>2 MR. LEE: Objection to form.</p> <p>3 THE WITNESS: Help me understand what you</p> <p>4 mean by "relationship."</p> <p>5 BY MR. KAPLAN: 10:31:31</p> <p>6 Q Well, let me ask the question: Could you</p> <p>7 have unrelated multiple data variables that would</p> <p>8 form a data construct, in your view?</p> <p>9 MR. LEE: Objection to form.</p> <p>10 THE WITNESS: Again, I'm not sure what 10:31:43</p> <p>11 "unrelated" means in this context as you're using</p> <p>12 the term.</p> <p>13 Related to what?</p> <p>14 BY MR. KAPLAN:</p> <p>15 Q Well, what did you mean by saying "multiple 10:31:52</p> <p>16 data variables could be a data construct"?</p> <p>17 What would be -- strike that.</p> <p>18 What would be an example, in your view, of</p> <p>19 multiple data variables that would form a data</p> <p>20 construct? 10:32:07</p> <p>21 A So if you take a look at paragraph 88 in my</p> <p>22 claim construction declaration, I give an example, I</p> <p>23 believe, that illustrates this.</p> <p>24 It says:</p> <p>25 "A POSITA would have known 10:32:22</p> <p style="text-align: right;">Page 54</p>	<p>1 variables?</p> <p>2 MR. LEE: Objection to form.</p> <p>3 THE WITNESS: Again, I don't know what you</p> <p>4 mean by "relationship." So the example that's</p> <p>5 described here gives an instance of how these two 10:33:56</p> <p>6 variables could store data or store, in this case,</p> <p>7 the logic that is going to be populated by a</p> <p>8 multimedia item, which could be various things that</p> <p>9 I describe also in my declaration. And the code</p> <p>10 that implements this or the logic that uses the 10:34:18</p> <p>11 play_now and play_next data variables could use them</p> <p>12 in the way as described here.</p> <p>13 I don't know how that corresponds to the</p> <p>14 phrase you use, "relationship."</p> <p>15 BY MR. KAPLAN: 10:34:33</p> <p>16 Q Well, presumably you could have two</p> <p>17 variables that, in your view, together do constitute</p> <p>18 a data construct, or in the alternative, you could</p> <p>19 have two variables that together do not constitute a</p> <p>20 data construct; is that fair? 10:34:49</p> <p>21 A Again, without understanding the context,</p> <p>22 it's hard to know how to answer that question.</p> <p>23 Q Are every two variables going to form a</p> <p>24 data construct, in your view?</p> <p>25 A Again, without knowing -- without 10:35:05</p> <p style="text-align: right;">Page 56</p>
<p>1 that a 'playback device' could</p> <p>2 store in its memory plural</p> <p>3 'multimedia items' across</p> <p>4 multiple data variables (in other</p> <p>5 words, not stored as an 'ordered 10:32:33</p> <p>6 list') and still playback the</p> <p>7 media in a specified order."</p> <p>8 And then I go on and talk in the rest of</p> <p>9 that paragraph about how the playback device could</p> <p>10 have a data variable called "play_now." It gets 10:32:44</p> <p>11 populated by a first multimedia item. And another</p> <p>12 data variable called "play_next" that gets populated</p> <p>13 by a second multimedia item. And then have the</p> <p>14 logic play the media corresponding to the play_now</p> <p>15 data variable before the media corresponding to the 10:33:00</p> <p>16 play_next data variable.</p> <p>17 And, of course, this is just a specific</p> <p>18 example in a different part of my declaration</p> <p>19 talking about singular versus plural items, but I</p> <p>20 think it answers your question about the concept of 10:33:17</p> <p>21 a data construct and how the data construct could be</p> <p>22 something that would involve multiple variables,</p> <p>23 multiple data variables, as it says in paragraph 58.</p> <p>24 Q In your example in paragraph 88, is there a</p> <p>25 relationship between the play_now and play_next data 10:33:39</p> <p style="text-align: right;">Page 55</p>	<p>1 understanding the context, it's hard to answer that</p> <p>2 question. I'm giving you a specific example here</p> <p>3 which are a pair of data variables that, as I</p> <p>4 described earlier in paragraph 58, would be an</p> <p>5 example of a data construct in this particular case 10:35:23</p> <p>6 relating to playback devices, having the ability to</p> <p>7 store in the memory multimedia items, plural.</p> <p>8 Q Right.</p> <p>9 What I'm trying to get at here is, I want</p> <p>10 to understand the basis for your opinion that allows 10:35:40</p> <p>11 you to identify when multiple independent variables</p> <p>12 will form a construct and when they won't.</p> <p>13 Do you understand my question?</p> <p>14 A I think so. I think I just gave you an</p> <p>15 example where two data variables are being used 10:36:04</p> <p>16 together with logic in order to perform some</p> <p>17 capability that could be useful in the context of a</p> <p>18 playback system that would form a data construct, as</p> <p>19 I describe in paragraph 58.</p> <p>20 Q Can you give me an example of when two data 10:36:24</p> <p>21 variables would not form a data construct, in your</p> <p>22 view?</p> <p>23 MR. LEE: Objection to form, incomplete,</p> <p>24 relevance.</p> <p>25 THE WITNESS: I would have to think more 10:36:38</p> <p style="text-align: right;">Page 57</p>

<p>1 about it. In this case, I was looking for examples 2 that demonstrated a data construct where multiple 3 data variables could be used in the context of 4 playback devices which, as I understand it, are the 5 focus of the -- my claim construction declaration -- 10:36:55 6 one of the focal points of my claim construction 7 declaration. 8 BY MR. KAPLAN: 9 Q So let me try to narrow the question and 10 I'll see if that helps. 10:37:06 11 In the context of playback devices, can you 12 give me an example of when you would have two 13 variables that would not form a data construct, in 14 your view? 15 MR. LEE: Objection to form, vague, 10:37:21 16 confusing, scope, relevance. 17 THE WITNESS: Yeah. I would have to think 18 about that some more. It's outside the scope of 19 what I've done here. 20 My analysis is focusing on the different 10:37:32 21 ways in which Google's construction of playback 22 queue is overly narrow and, in fact, reads out a 23 number of the different embodiments that are 24 disclosed in the specification. 25 /// 10:38:10</p> <p style="text-align: right;">Page 58</p>	<p>1 example of two variables in the playback device 2 context that would not form a data construct; right? 3 MR. LEE: Objection to form, 4 mischaracterizes, vague, confusing. 5 THE WITNESS: Yeah. I wouldn't -- I don't 10:39:57 6 think that's what I answered you before when you 7 asked the same question. 8 BY MR. KAPLAN: 9 Q Well, then, I would like your answer as to 10 what is an example of two variables in a playback 10:40:08 11 context that don't form a data construct? 12 MR. LEE: Objection to form, vague, 13 incomplete, scope, relevance. 14 THE WITNESS: I just go back to the answer 15 I gave you when you asked the question two or three 10:40:22 16 minutes ago. 17 I don't remember exactly what the answer 18 was, but I'm sure it's there for the record. 19 BY MR. KAPLAN: 20 Q I thought that the answer was that you 10:40:32 21 couldn't give me an example, sitting here today, 22 because you thought it was outside the scope of your 23 declaration. 24 A I don't think that's quite what I said, but 25 I stand by what I said before. 10:40:44</p> <p style="text-align: right;">Page 60</p>
<p>1 BY MR. KAPLAN: 2 Q Okay. Can you give me an example in the 3 context of playback devices where you would have a 4 single variable that would not form a queue? 5 MR. LEE: Same objection; form, scope, 10:38:36 6 relevance. 7 THE WITNESS: A single variable that would 8 not form a queue? 9 MR. LEE: It's vague, confusing. I'm 10 sorry. 10:38:52 11 THE WITNESS: A Boolean flag of some sort, 12 perhaps. Keep in mind, I haven't done that 13 particular analysis in my declaration, so I would 14 have to think about it, but seems like some Boolean 15 flag. 10:39:12 16 BY MR. KAPLAN: 17 Q So what I'm getting at here is, you've 18 provided -- I think at least an example in the case 19 where you have two variables where that might fit 20 the data construct definition that you gave, right, 10:39:27 21 that's paragraph 88? 22 A That's correct. 23 Q I just want to ask one more time to make 24 sure that the answer is clear. 25 Sitting here today, you can't give me an 10:39:40</p> <p style="text-align: right;">Page 59</p>	<p>1 Q Well, I'm going to have to ask it again 2 because I think we had different understandings of 3 what your testimony was, so I'll ask it one more 4 time. 5 Can you give me an example in the playback 10:40:55 6 device context of two variables that together don't 7 form a data construct? 8 A And I'll just give the same answer I gave 9 before. 10 I believe I asked -- you asked me that 10:41:06 11 question before and I think I gave you an answer 12 that I stand behind, so you may have a different 13 interpretation of what the answer is, but I believe 14 my answer is my answer. 15 Q I don't know what your answer was. I 10:41:24 16 didn't get an example and I don't think you said -- 17 I don't recall an example, so can you answer it one 18 more time, please? 19 MR. LEE: Objection to form, incomplete 20 hypothetical, vague, confusing, relevance, beyond 10:41:36 21 the scope. 22 THE WITNESS: Again, I'll just point back. 23 You asked me the question probably now four 24 minutes ago and I gave you an answer at that time 25 and I don't remember every detail of what I said, 10:41:48</p> <p style="text-align: right;">Page 61</p>

<p>1 but I think I answered your question.</p> <p>2 So I'm just going to stick with what I said</p> <p>3 before, which should be in the record.</p> <p>4 BY MR. KAPLAN:</p> <p>5 Q Well, it's all in the record and I'm not 10:41:56</p> <p>6 trying to cross-examine you against your prior</p> <p>7 answer, both of those will be in the record, but I</p> <p>8 don't recall hearing an example like I asked for.</p> <p>9 If you think you gave me one, I would like</p> <p>10 to hear that example again. 10:42:08</p> <p>11 A I think my previous answer gave you the</p> <p>12 answer to your question.</p> <p>13 Q Can you give me an example -- I'll ask it</p> <p>14 one more time and then we will move on. Okay?</p> <p>15 Sitting here today, in the playback device 10:42:24</p> <p>16 context, can you give me an example of two variables</p> <p>17 that, together, don't form a data construct?</p> <p>18 MR. LEE: Same objection; incomplete,</p> <p>19 vague, confusing, scope, relevance.</p> <p>20 THE WITNESS: So again, I'll point you back 10:42:41</p> <p>21 to the response I gave you when you asked me that</p> <p>22 question the first time. I'm going to stay with</p> <p>23 that answer to your question.</p> <p>24 BY MR. KAPLAN:</p> <p>25 Q If you go to page 17 of your declaration. 10:43:32</p> <p style="text-align: right;">Page 62</p>	<p>1 to me as I read the proposed Google claim</p> <p>2 construction whether they're only intending for a</p> <p>3 playlist to be satisfied by a -- sorry -- a playback</p> <p>4 queue, not a playlist -- a playback queue to be</p> <p>5 satisfied by a user defined playlist, which is the 10:46:03</p> <p>6 way the construction appears to suggest because it</p> <p>7 says something about selected by the user for</p> <p>8 playback. That's the particular phrase that I'm</p> <p>9 addressing here.</p> <p>10 And it appears to me that if that was the 10:46:20</p> <p>11 intent of Google's construction, it would exclude a</p> <p>12 number of different embodiments or examples that are</p> <p>13 explicitly described in the specification having to</p> <p>14 do with playing an album of songs, or a service</p> <p>15 defined playlist, or something as I say, actually, 10:46:40</p> <p>16 right above the footnote at the bottom of page 17</p> <p>17 continuing on to the top of page 18 where you could</p> <p>18 have some kind of online disk jockey service that</p> <p>19 will decide what songs to play next, which really</p> <p>20 isn't the same thing as being something selected by 10:47:00</p> <p>21 the user, or a song selected by the user, or</p> <p>22 multimedia content selected by the user.</p> <p>23 So that's the way in which I'm addressing</p> <p>24 this issue of selected by the user for playback. It</p> <p>25 just wasn't clear to me, given the construction put 10:47:15</p> <p style="text-align: right;">Page 64</p>
<p>1 I'm going to be looking at footnote 4.</p> <p>2 A I see that.</p> <p>3 Q Is it your view that Google's construction</p> <p>4 is unclear as to whether or not it covers user</p> <p>5 defined playlists? 10:44:02</p> <p>6 MR. LEE: Objection to form.</p> <p>7 THE WITNESS: Let me see the context in</p> <p>8 which that footnote appears.</p> <p>9 So this footnote appears in the context of</p> <p>10 one of my other opinions that Google's proposed 10:44:44</p> <p>11 construction appears to be given just a very narrow</p> <p>12 example of one potential embodiment, good</p> <p>13 embodiment, in my opinion, good potential</p> <p>14 embodiment, a playback queue, which, in my mind,</p> <p>15 appears to be more associated with what a person in 10:45:13</p> <p>16 the ordinary skill in the art would be associated</p> <p>17 with being a user defined playlist rather than</p> <p>18 actually explaining what a playback queue is in the</p> <p>19 construction.</p> <p>20 And so that's the context. That's the 10:45:23</p> <p>21 sentence that appears towards the end of</p> <p>22 paragraph 47, and this footnote is just ripping on</p> <p>23 this a little further, talking about a topic that</p> <p>24 actually appears later in -- I think it's section D</p> <p>25 of my declaration -- where I'm saying it's not clear 10:45:42</p> <p style="text-align: right;">Page 63</p>	<p>1 forward what Google's intent was.</p> <p>2 BY MR. KAPLAN:</p> <p>3 Q In paragraph 49 of your declaration, you</p> <p>4 set forth an opinion that Google's proposed</p> <p>5 construction would exclude service defined 10:47:32</p> <p>6 playlists.</p> <p>7 Do you see that?</p> <p>8 A Well, I think I'm just describing what an</p> <p>9 example of a service defined playlist is, or an</p> <p>10 Internet radio station is in paragraph 49, as I read 10:47:53</p> <p>11 paragraph 49.</p> <p>12 Q Do you have a critique of Google's</p> <p>13 construction that service defined playlists would be</p> <p>14 excluded improperly by Google's construction?</p> <p>15 A I think as I mentioned in footnote 4, it's 10:48:07</p> <p>16 just not clear to me what Google's construction</p> <p>17 means, because the construction includes the phrase</p> <p>18 "selected by the user for playback," and that</p> <p>19 particular analysis of the playback queue not being</p> <p>20 limited to user selected content, unlike what it 10:48:35</p> <p>21 appears that Google may be saying, actually appears</p> <p>22 starting towards the bottom of page 31.</p> <p>23 And as I say in paragraph 93 on page 32,</p> <p>24 it's unclear to me whether Google's use of the term</p> <p>25 "selected by the user for playback," it's not clear 10:48:59</p> <p style="text-align: right;">Page 65</p>

<p>1 to me whether Google intends that language to 2 include queuing a list of media items curated by a 3 third party media service, that's kind of a service 4 provided approach, automatically queuing album songs 5 by virtue of the user selecting the first song of an 10:49:17 6 album.</p> <p>7 And when I say other examples, having 8 things related to queueing of other media items, or 9 as we talked about before, some kind of disk jockey 10 service. It's just not clear what Google means. 10:49:32</p> <p>11 So I think my main critique, which 12 continues on paragraph 93 and below, this is my 13 understanding of my -- my not understanding of 14 Google's phrase, because I don't understand what it 15 means. 10:49:49</p> <p>16 It appears that if it were to only be 17 playback items that were multimedia that were 18 selected by the user for playback, that would be 19 inconsistent with a POSITA's understanding of the 20 term "playback queue," as described in the two 10:50:04 21 patents at issue.</p> <p>22 Q Do you understand Google's proposed 23 construction to require that the multimedia items 24 are selected by the user for playback?</p> <p>25 A I think the point I'm making, I don't 10:50:20 Page 66</p>	<p>1 further requires that the 2 'ordered list of multimedia 3 items' be 'selected by the user 4 for playback.'"</p> <p>5 BY MR. KAPLAN: 10:52:01</p> <p>6 Q But Google's proposed construction uses the 7 word "is," which refers to a singular subject as 8 opposed to a plural subject.</p> <p>9 So Google's construction is actually 10 grammatically saying it's the ordered list that is 10:52:12 11 selected by the user for playback; right?</p> <p>12 A Well, as I read it here, it's the ordered 13 list of multimedia items.</p> <p>14 Q And the ordered list is a singular subject; 15 correct? 10:52:30</p> <p>16 A Ordered list is a singular subject, but 17 it's my understanding that the phrase "ordered list 18 of multimedia items" is what Google's proposing be 19 selected by the user for playback.</p> <p>20 Q So under Google's proposed construction, 10:52:48 21 it's not the multimedia items themselves that are 22 selected by the user for playback, it's the ordered 23 list; right?</p> <p>24 A I'm not really sure what distinction you're 25 making here. When I read the analysis here in 10:53:08 Page 68</p>
<p>1 understand what Google means. It seems very 2 unclear. So because it's unclear, I'm trying to 3 provide an analysis of what it might mean and then 4 describe why I believe that that analysis -- why 5 that -- those meanings would be inconsistent with 10:50:40 6 what's the intended part of the patents at issue.</p> <p>7 Q Is it your understanding that the org list 8 for the multimedia items are selected by playback -- 9 strike that. I didn't correctly quote the 10 construction. 10:50:59</p> <p>11 So Google's proposed construction says: 12 "An order list of multimedia 13 items is selected by the user for 14 playback."</p> <p>15 Do you see that? 10:51:10</p> <p>16 A I see Google's proposed construction, yes.</p> <p>17 Q Is it your understanding that the "is 18 selected by the user for playback" refers to 19 multimedia items, or an ordered list?</p> <p>20 MR. LEE: Objection to form. 10:51:26</p> <p>21 THE WITNESS: So if you take a look at 22 paragraph 91 of my declaration, I say essentially 23 it's my understanding that: 24 "Google's proposed 25 construction for 'playback queue' 10:51:50 Page 67</p>	<p>1 section D of my declaration, I'm referring to the 2 phrase "ordered list of multimedia items" as being 3 what Google is proposing be selected by the user for 4 playback.</p> <p>5 Q Well, part of your critique -- I'm sorry. 10:53:26 6 Go ahead, Dr. Schmidt.</p> <p>7 A And the analysis in section D of this part 8 of my claim construction declaration is asking 9 questions about what does that mean?</p> <p>10 And it's not clear what that means, as I 10:53:42 11 describe here. It's not clear whether it excludes 12 or includes queueing a playlist of media items, so I 13 think leaving aside the whole issue of ordered, 14 whether it has to be an ordered list, that's 15 discussed in section C of my declaration. 10:54:01</p> <p>16 But as I say in paragraph 93, it's not 17 clear whether Google's construction excludes 18 queueing a playlist of media items, or a playlist is 19 singular, to your point, of media items that is 20 curated, so there's the singular "is," by a third 10:54:19 21 party media service.</p> <p>22 That's the part of the analysis here that I 23 find confusing and unclear and it appears that it 24 could very well be the case that Google's -- if that 25 is the intent, that the playlist must be selected, 10:54:32 Page 69</p>

<p>1 whether that's something that is -- it's not clear 2 what Google is suggesting here and whether they're 3 reading out things that appear to be intentionally 4 part of the patents at issue.</p> <p>5 Q If it's the playlist that's selected by the 10:54:51 6 user, then falling under that would be examples like 7 Pandora where a radio station is selected by the 8 user; right?</p> <p>9 A There's a bunch of different examples that 10 I think occur in the patent of ways to get content 10:55:10 11 play.</p> <p>12 Q Pandora being one of them, I believe. 13 Spotify is another example; correct?</p> <p>14 A Let's see. 15 The patent gives several different examples 10:55:34 16 of third party music applications, including 17 Pandora, Rhapsody, Spotify, and so on.</p> <p>18 Q And in the Pandora example for -- just 19 taking that as a single example, you understand that 20 for a user to use Pandora, he or she selects a radio 10:55:52 21 station which is associated with a service defined 22 playlist; right?</p> <p>23 A That's my understanding.</p> <p>24 Q And in that example, the user is not 25 actually identifying and selecting all of the songs 10:56:08 Page 70</p>	<p>1 A I'm there.</p> <p>2 Q There's a sentence within that paragraph 3 that begins: 4 "When the decision 316 5 determines that the specified 10:58:42 6 media item is to be played back 7 next, the specified media item 8 can be added 318 to a top of a 9 playback queue. Alternatively, 10 when the decision 316 determines 10:58:54 11 that the specified media item is 12 not to be played back next, the 13 specified media item can be added 14 320 to a bottom of the playback 15 queue." 10:59:07 16 Do you see that?</p> <p>17 A I do.</p> <p>18 Q This portion of the reference is describing 19 how media items can be added or removed from a 20 queue? 10:59:16</p> <p>21 A No.</p> <p>22 Q Why not?</p> <p>23 A I don't see anything in that -- in the line 24 you read to me that describes removing an item.</p> <p>25 Q Fair enough. 10:59:54 Page 72</p>
<p>1 or multimedia items within that radio station, the 2 service is identifying them in playing those; right?</p> <p>3 A Again, that's my understanding.</p> <p>4 Q Let's turn to paragraph 51 of your 5 declaration. 10:56:34</p> <p>6 A Okay.</p> <p>7 MR. KAPLAN: I'm going to introduce another 8 exhibit. Please let me know when you have it up.</p> <p>9 THE REPORTER: Is this Exhibit 4?</p> <p>10 MR. KAPLAN: This is Exhibit 4. And it 10:57:14 11 will be United States Patent application number 12 U.S. 2011/4330.</p> <p>13 (Whereupon, Google Exhibit 4 was 14 marked for identification by the 15 Court Reporter.) 10:57:56</p> <p>16 MR. LEE: Don't worry about the dogs. I 17 know Mike has at least two sitting there.</p> <p>18 THE REPORTER: Sorry.</p> <p>19 MR. LEE: It's not a problem at all.</p> <p>20 THE WITNESS: Okay. I got it. 10:58:07</p> <p>21 BY MR. KAPLAN: 22 Q Can you turn to paragraph 51 of that 23 reference. I apologize. 24 Can you turn to paragraph 48 of that 25 reference. 10:58:28 Page 71</p>	<p>1 This portion of the record is just 2 describing adding items to a queue; is that fair?</p> <p>3 A The reference says what it says. It says 4 that the -- in this particular context, it talks 5 about how an item can be added to the top of a 11:00:12 6 playback queue or added to the bottom of a playback 7 queue. I see that.</p> <p>8 Q What does that mean, "top of a playback 9 queue"?</p> <p>10 A I would have to read further to see what 11:00:23 11 they're referring to by "playback queue" here to see 12 what they mean.</p> <p>13 Q Would a person of art understand what the 14 top or bottom of a queue refers to?</p> <p>15 While you think about it, let me ask a 11:00:58 16 slightly better question that actually makes sense.</p> <p>17 Would a person of skill in the art 18 understand what the top or bottom of a queue refers 19 to, "Q-U-E-U"...</p> <p>20 A It depends on the context. 11:01:11</p> <p>21 Q Do you understand what adding a media item 22 to the top or bottom of a queue means?</p> <p>23 A That's what I'm looking for, to see how 24 it's being used in this particular patent 25 description and how it's defined. 11:01:31 Page 73</p>

<p>1 Again, I'm trying to see if there's a 2 definition of how queue is defined here.</p> <p>3 Q So can you answer my question without 4 finding the definition on the patent, or not?</p> <p>5 A Well, depending on the context in which 11:02:57 6 queue is used, top and bottom are not common terms 7 used to describe queues. That's why I was trying to 8 see if they were defining it in some other way.</p> <p>9 Q What terms are used to describe the front 10 and end of a queue, typically? 11:03:13</p> <p>11 A Again, it depends on the context in which 12 we're referring.</p> <p>13 Q How about in the playback device context?</p> <p>14 A Typically people -- well, again, it's hard 15 to say. If you think about a queue, queues can mean 11:03:35 16 many different things. As I describe in my report 17 on paragraph 47, a queue is -- a playback queue is a 18 container that can be used to pull multimedia for 19 playback and different types and arrangements of 20 multimedia could be queued. So what that's really 11:04:03 21 saying is, there's different ways to understand what 22 a queue could be.</p> <p>23 So I don't know if there's -- I don't think 24 there's really one dictionary definition of a 25 playback queue that would be appropriate for all 11:04:13 Page 74</p>	<p>1 queuing disciplines or queuing protocols, if you 2 will, and some of the queuing protocols would 3 include things like last-in/first-out; other 4 protocols are first-in/first-out.</p> <p>5 There are other protocols where queues are 11:05:48 6 organized in terms of so-called priority order. 7 There's other protocols where you can move elements 8 around in a queue. There's other protocols that do 9 other things where you can add or remove items from 10 the beginning and end. You can then add them from 11:06:04 11 the -- you can add or remove them from the beginning 12 or add or remove them from the end.</p> <p>13 There's a number of different ways to teach 14 what queues do.</p> <p>15 Q Have you taught that queues don't need to 11:06:16 16 have an order?</p> <p>17 A Again, there's different ways to organize 18 queues. Yes, there are certainly queues that do not 19 have an order from the point of view from the way 20 the user is going to access their contents. 11:06:32</p> <p>21 Q What's an example of a queue that doesn't 22 have an order?</p> <p>23 A A queue that would provide the elements in 24 a random sequence.</p> <p>25 Q Would the queue be stored in the computer 11:06:44 Page 76</p>
<p>1 context, and that's why I describe here in 2 paragraph 47 and later in paragraphs 58 and 59, how 3 I believe a person of ordinary skill in the art 4 would have understood playback queue to be 5 interpreted in the context of this patent. 11:04:31 6 How the other patent -- that's why I was 7 trying to see how they're giving definition of a 8 playback queue, and they may be defining it in some 9 more specific way.</p> <p>10 Q Have you ever heard of queues described as 11:04:48 11 having a first-in/first-out characteristic?</p> <p>12 A Queues can be organized in all kinds of 13 different ways, so that's one potential way of 14 organizing, but there's lots of other ways to 15 organize queues as well. 11:05:03 16 Q Have you ever programmed using queues that 17 have a first-in/first-out characteristic?</p> <p>18 A I have.</p> <p>19 Q In what context -- strike that.</p> <p>20 Have you ever taught in any of your classes 11:05:14 21 at Vanderbilt University that queues might have a 22 first-in/first-out characteristic?</p> <p>23 A I have taught queues in a number of 24 different ways. Typically when I talk about queues, 25 I talk about them being able to have different 11:05:32 Page 75</p>	<p>1 or memory with an order?</p> <p>2 MR. LEE: Objection; form, foundation.</p> <p>3 THE WITNESS: I'm not sure what you mean by 4 "order."</p> <p>5 BY MR. KAPLAN: 11:07:02</p> <p>6 Q So I think you were saying that a user 7 might access the elements of a queue in a random 8 order.</p> <p>9 Did I get that right?</p> <p>10 A I think I said a random sequence. 11:07:13</p> <p>11 Q Fair enough.</p> <p>12 The user may access the elements of a queue 13 in a random sequence according to you; right?</p> <p>14 A That's correct.</p> <p>15 Q Would the queue as it's stored in the 11:07:23 16 computer have an order?</p> <p>17 MR. LEE: Objection to form, vague, 18 confusing, incomplete.</p> <p>19 THE WITNESS: Again, it's not clear what 20 you mean by "order." 11:07:40</p> <p>21 BY MR. KAPLAN:</p> <p>22 Q So you -- have you heard of people 23 describing queues as having an order?</p> <p>24 A It is possible for queues to have order; 25 although not every queue needs to be ordered. 11:07:52 Page 77</p>

<p>1 Q What is an example of a queue that's not 2 ordered?</p> <p>3 A A queue where the elements are accessed 4 randomly.</p> <p>5 Q What is an example of a queue that's -- 11:08:07 6 well, let me ask a better question.</p> <p>7 What is an example of a queue where the 8 elements can only be accessed randomly?</p> <p>9 MR. LEE: Objection to the form.</p> <p>10 THE WITNESS: A random queue. 11:08:25 11 Are you asking for what's an application of 12 such a thing?</p> <p>13 BY MR. KAPLAN:</p> <p>14 Q Well, I'm not sure I understand what you 15 mean by "random queue." 11:08:37 16 Can you describe that a bit more?</p> <p>17 A Sure.</p> <p>18 You could have some collection of elements 19 and you might want to select the elements in some 20 random order, so it -- there could be lots of 11:08:54 21 different reasons for doing this.</p> <p>22 You might want to do this for some kind of 23 encryption purposes, or you might want to do this 24 for some kind of testing purposes. You might want 25 to be able to see how different kinds of algorithms 11:09:07 Page 78</p>	<p>1 order in your random queue example?</p> <p>2 MR. LEE: Objection to the form.</p> <p>3 THE WITNESS: Not necessarily, no. Because 4 they could move around. In fact, in many 5 implementations of these forms of data algorithms 11:10:41 6 and data constructs and data structures and so on, 7 they -- doesn't really matter what order they're 8 stored in, you're going to be accessing them in 9 random order or random sequence.</p> <p>10 BY MR. KAPLAN: 11:10:59</p> <p>11 Q The random order or random sequence, are 12 you removing elements from the queue that are not at 13 the front or at the end of the queue?</p> <p>14 MR. LEE: Objection to form, vague, 15 incomplete. 11:11:11</p> <p>16 THE WITNESS: In fact, there's many 17 different implementations of the style of data 18 generation I'm describing here. Some remove 19 elements; some don't remove elements.</p> <p>20 The key issue here is that you're accessing 11:11:23 21 each element in -- that's queued up in a manner that 22 is going to produce random output. And whether or 23 not something is removed or not is really an 24 implementation detail of how you would implement 25 that particular abstraction. 11:11:40 Page 80</p>
<p>1 might behave when confronted with data that's in 2 random order, literally.</p> <p>3 For example, certain algorithms behave very 4 well on data that's nearly sorted. They perform 5 differently on data that's randomly sorted, or not 11:09:22 6 sorted at all. Randomly -- just randomly -- values 7 that come in random ways.</p> <p>8 And so the ability to be able to take some 9 collection of values and provide those values in 10 some order that's not predefined but is, in fact, 11:09:41 11 going to be accessed based on a random number 12 generator is not uncommon.</p> <p>13 I do that all the time when I'm 14 demonstrating various capabilities in courses I 15 teach at Vanderbilt and elsewhere. So that would be 11:09:58 16 an example of a way to take a collection of data, a 17 queue of data, and access it in a random order.</p> <p>18 Q Are the elements within that queue 19 connected to the other elements within that queue 20 randomly? 11:10:17</p> <p>21 MR. LEE: Objection to the form, vague.</p> <p>22 THE WITNESS: I'm not sure what you mean by 23 "randomly."</p> <p>24 BY MR. KAPLAN:</p> <p>25 Q Are the elements stored in the queue in an 11:10:28 Page 79</p>	<p>1 BY MR. KAPLAN:</p> <p>2 Q In the random queue that you're describing, 3 are elements added to the queue randomly in order to 4 randomize it?</p> <p>5 A Again. 11:11:55</p> <p>6 MR. LEE: Objection to the form, incomplete 7 hypothetical, vague.</p> <p>8 THE WITNESS: There's various ways to 9 implement these kind of techniques. Some of the 10 ways would add the elements in some order and then 11:12:05 11 access them randomly; others would add them randomly 12 and access them randomly. You could add them 13 randomly and access sequentially. There's all 14 different ways to implement these kinds of data 15 abstracts. 11:12:21</p> <p>16 BY MR. KAPLAN:</p> <p>17 Q In your view, what are the characteristics 18 of a queue?</p> <p>19 A Well, again, in what context?</p> <p>20 Q A playback device context. 11:12:32</p> <p>21 A So in the playback device context, as I 22 describe in paragraph 47 of my declaration, a queue 23 is a container that can hold multimedia or resource 24 locators to multimedia items for playback and have 25 different types and arrangements of multimedia data 11:12:53 Page 81</p>

<p>1 that could be queued up, such as single songs or 2 playlist and so on.</p> <p>3 Later I go into more detail in the context 4 of how a POSITA would understand a playback queue to 5 be realized in the context of the patents at issue 11:13:08 6 in the case which appear in paragraphs 58 and 59.</p> <p>7 Q In your view, the queue can be a single 8 data variable; right?</p> <p>9 MR. LEE: Objection.</p> <p>10 THE WITNESS: Certainly, yes. 11:13:29</p> <p>11 BY MR. KAPLAN:</p> <p>12 Q And in your view, the queue can be multiple 13 data variables; right?</p> <p>14 A As described on paragraph 58 in my report, 15 I mention that POSITA at the time of the invention 11:13:42 16 would have understood that a queue could be 17 implemented in different ways, taking different 18 forms, such as a data construct, like a single data 19 variable, multiple data variables, DataRay, and 20 there's obviously other ways to do it as well. 11:13:58</p> <p>21 Q What ways can a queue not be constructed?</p> <p>22 MR. LEE: Objection to form.</p> <p>23 THE WITNESS: There's infinite ways which a 24 queue cannot be constructed.</p> <p>25 /// 11:14:15</p> <p style="text-align: right;">Page 82</p>	<p>1 more.</p> <p>2 BY MR. KAPLAN:</p> <p>3 Q Okay. Let's move on to paragraph 52.</p> <p>4 Let me know when you're there.</p> <p>5 A I'm there. 11:16:01</p> <p>6 MR. KAPLAN: This requires me to get 7 another reference. Give me one moment.</p> <p>8 I've introduced Exhibit 5.</p> <p>9 (Whereupon, Google Exhibit 5 was 10 marked for identification by the 11:16:34 11 Court Reporter.)</p> <p>12 BY MR. KAPLAN:</p> <p>13 Q Please let me know when you see it, 14 Dr. Schmidt.</p> <p>15 Exhibit 5 will be United States patent 11:16:38 16 application number 2012/89910.</p> <p>17 A Okay. I'm there.</p> <p>18 Q Can you go to paragraph 50 of Exhibit 5 and 19 let me know when you're there.</p> <p>20 A I'm there. 11:17:42</p> <p>21 Q If you could read the portion to yourself, 22 Dr. Schmidt, that begins "Selecting the play_next 23 button 524 causes playback."</p> <p>24 (Document reviewed by the witness.)</p> <p>25 THE WITNESS: Okay. I see that. 11:18:18</p> <p style="text-align: right;">Page 84</p>
<p>1 BY MR. KAPLAN:</p> <p>2 Q If you were trying to hold multiple pieces 3 of data, for example, songs, how would you store 4 those in some type of data structure that's not a 5 queue? 11:14:26</p> <p>6 MR. LEE: Objection to form, vague, 7 incomplete hypothetical, foundation.</p> <p>8 THE WITNESS: I mean, you could certainly 9 store anything in a way that would not be accessible 10 in the manner that is being described here in the 11:14:56 11 patents at issue.</p> <p>12 BY MR. KAPLAN:</p> <p>13 Q What do you mean by that?</p> <p>14 A You could store -- you asked me, are there 15 ways to implement something that are not a queue. 11:15:07 16 You could store data in a way that had no 17 way to access the elements at all.</p> <p>18 Q Besides not being able to access the 19 elements at all, what are the ways that you could 20 store data, for example, songs, not in a queue? 11:15:20</p> <p>21 MR. LEE: Objection to form, foundation, 22 scope.</p> <p>23 THE WITNESS: I would have to spend more 24 time thinking about that. I haven't prepared that 25 analysis for today. I have to think about it some 11:15:36</p> <p style="text-align: right;">Page 83</p>	<p>1 BY MR. KAPLAN:</p> <p>2 Q And did you read through the rest of 3 paragraph 50?</p> <p>4 A Oh, no. Sorry. I just read that sentence.</p> <p>5 I'll read the rest of it. 11:18:28</p> <p>6 Q Thank you.</p> <p>7 (Document reviewed by the witness.)</p> <p>8 MR. KAPLAN: It seemed too quick.</p> <p>9 THE WITNESS: Okay. I see that.</p> <p>10 I've read it. Sorry. 11:19:04</p> <p>11 BY MR. KAPLAN:</p> <p>12 Q In the second sentence that you just read, 13 the specification here refers to:</p> <p>14 "Placing the selected media 15 items at the front of the 11:19:18 16 playback queue."</p> <p>17 Do you know what "front of the playback 18 queue" refers to?</p> <p>19 MR. LEE: Objection; form, foundation.</p> <p>20 THE WITNESS: Again, I would have to go 11:19:46 21 back and see more how they're describing what a 22 playback queue is in this context.</p> <p>23 I think the main purpose of this reference 24 was just to point out that queues can have zero 25 items. They can have one item, they can have more 11:20:01</p> <p style="text-align: right;">Page 85</p>

<p>1 than one item. There's no requirement that a queue 2 has to hold multiple items, which appears to be what 3 the construction has for -- from Google.</p> <p>4 BY MR. KAPLAN:</p> <p>5 Q Do you see in the portion you just read, 11:20:19 6 the specification also describes appending tracks to 7 the end of the existing playback queue?</p> <p>8 Do you see that? 9 I'm paraphrasing.</p> <p>10 A No, I don't see. 11:20:40 11 Where is that located?</p> <p>12 Q The sentence that begins: 13 "Selecting the Append to 14 Queue button 526 causes the one 15 or more selected tracks to be 11:21:05 16 added to the end of an existing 17 playback queue."</p> <p>18 Do you see that?</p> <p>19 A I do.</p> <p>20 Q The fact that the queue has a -- strike 11:21:18 21 that.</p> <p>22 Does the fact that the queue that they're 23 discussing here in this specification have a front 24 and an end indicate to you that this queue is 25 ordered? 11:21:29</p> <p style="text-align: right;">Page 86</p>	<p>1 And, therefore, as I say in my report 2 towards the end of paragraph 76 -- or my 3 declaration, sorry, that the definition that the 4 proposal for the construction that Google is putting 5 forth would appear to not count a queue having zero 11:25:33 6 or one elements as being part of the construction of 7 playback queue.</p> <p>8 So I think that this reference here that I 9 just looked through would be further indication of 10 the inconsistency that Google has with -- Google's 11:25:50 11 proposed construction has with other extrinsic 12 evidence at the time.</p> <p>13 BY MR. KAPLAN:</p> <p>14 Q In your view, can a queue be a list?</p> <p>15 MR. LEE: Objection to form, vague. 11:26:08</p> <p>16 THE WITNESS: There's many different ways 17 to implement queues. You can implement queues as 18 raised contiguous data structures. You can 19 implement queues as linked lists. You can implement 20 queues as trees. You can implement queues as hash 11:26:22 21 tables. You can implement queues as file systems. 22 You can implement queues, as I describe in my 23 declaration, in using other data constructs, such as 24 multiple data variables or single data variable. 25 There's different ways to implement queues. 11:26:40</p> <p style="text-align: right;">Page 88</p>
<p>1 MR. LEE: Objection to form, foundation. 2 THE WITNESS: Again, I need to go and look 3 more carefully how they're defining the data 4 structures or if they're defining the data 5 structures that they're calling a playback queue in 11:21:45 6 this context.</p> <p>7 BY MR. KAPLAN:</p> <p>8 Q If you want to take a moment, you can do 9 that.</p> <p>10 MR. LEE: Caution the witness to be 11:22:10 11 thorough in reviewing the document.</p> <p>12 THE WITNESS: So I looked through all the 13 references to playback queue in the specification 14 that I could search for, or that came up when I 15 searched for "playback queue," and as far as I can 11:24:42 16 tell, they don't disclose the structure of the 17 queue.</p> <p>18 But I will mention that the specification 19 makes it very clear that a playback queue can be 20 empty and it also mentions that playback queue can 11:24:54 21 contain one element, which in my mind is, again, as 22 I mention in my declaration, inconsistent with 23 Google's proposed construction that says that a 24 queue must be an ordered list of multimedia items, 25 implying that there's more than one of them. 11:25:14</p> <p style="text-align: right;">Page 87</p>	<p>1 BY MR. KAPLAN:</p> <p>2 Q Some of those ways involve lists; right?</p> <p>3 A Again, depending on how list is defined, 4 there's different kinds of lists. So I think that's 5 a case where certain terms are used broadly that 11:26:56 6 probably need to be narrowed down or we have to 7 recognize, as I mention in my report, that the 8 implementation of the queue container data construct 9 can take many different forms and so there's no one 10 representation. 11:27:16</p> <p>11 I think one of the big issues I have with 12 Google's proposed construction is it tries to narrow 13 the understanding of a playback queue to something 14 that looks a lot more like a user defined playlist 15 or user specified playlist as opposed to being how I 11:27:30 16 think the term "playback queue" is actually 17 described in the patents at issue.</p> <p>18 So the instruction is just very, very 19 narrow, overly narrow. It's reading a particular 20 implementation detail in a way that's not 11:27:43 21 representative of what a POSITA would understand the 22 queue to be, and by doing so, it's also excluding a 23 number of different embodiments that are put forth 24 explicitly in the specification of the patents.</p> <p>25 Q Let's say you have a queue that's an order 11:28:01</p> <p style="text-align: right;">Page 89</p>

<p>1 list of three items.</p> <p>2 Do you follow me so far?</p> <p>3 A Okay.</p> <p>4 Q And you remove two of those items from your</p> <p>5 queue. 11:28:13</p> <p>6 Follow me so far?</p> <p>7 A Okay.</p> <p>8 Q Is what's remaining an ordered list, or</p> <p>9 not?</p> <p>10 MR. LEE: Objection to the form, incomplete 11:28:23</p> <p>11 hypothetical, foundation.</p> <p>12 THE WITNESS: Again, we have to define what</p> <p>13 an "ordered list" means. So that's something also</p> <p>14 that's not really clear from Google's construction,</p> <p>15 what is meant by an ordered list. 11:28:41</p> <p>16 Ordered according to what?</p> <p>17 A list. It's just a lot -- I guess my main</p> <p>18 issue here is that the construction that Google is</p> <p>19 putting forth is inherently ambiguous because terms</p> <p>20 like "ordered list" are not really defined. 11:28:58</p> <p>21 And to the extent that they're narrowed</p> <p>22 down to be given a definition, then the construction</p> <p>23 that's put forth is overly narrow and it starts</p> <p>24 excluding various capabilities that are disclosed in</p> <p>25 the '615 and '033 patents. 11:29:16</p> <p style="text-align: right;">Page 90</p>	<p>1 is vague and overly narrow and reads out things that</p> <p>2 are part explicitly anticipated and disclosed in the</p> <p>3 specification. That's the key part for my analysis.</p> <p>4 BY MR. KAPLAN:</p> <p>5 Q Is the fact that Google's construction uses 11:30:55</p> <p>6 the term "ordered list" incorrect because a queue</p> <p>7 can have zero or one items in it?</p> <p>8 MR. LEE: Objection to form.</p> <p>9 THE WITNESS: The problem with -- well,</p> <p>10 let's see. I think I describe that. 11:31:13</p> <p>11 I think this is in section C.</p> <p>12 Let's see. Let me just make sure.</p> <p>13 So as I describe on paragraph 87 of my</p> <p>14 declaration, leaving aside whether we're dealing</p> <p>15 with one or more items, it's my opinion that a 11:31:43</p> <p>16 POSITA at the time of the invention would have known</p> <p>17 that an ordered list was not necessary in order to</p> <p>18 implement a playback queue.</p> <p>19 And really as I describe several other</p> <p>20 places, such as paragraph 47 and paragraphs 48 and 11:32:01</p> <p>21 49, a playback queue is really about a container</p> <p>22 that holds the element or elements or no elements,</p> <p>23 for that matter, to be played back rather than a</p> <p>24 particular data structure organized in a particular</p> <p>25 way. 11:32:23</p> <p style="text-align: right;">Page 92</p>
<p>1 BY MR. KAPLAN:</p> <p>2 Q I'm trying to ask a narrower question here,</p> <p>3 which is -- I think we agree that you can have an</p> <p>4 order list that could be an example of a queue and</p> <p>5 then you can remove items from that queue until you 11:29:32</p> <p>6 get down to one or zero items left in the queue.</p> <p>7 Are you with me so far?</p> <p>8 A I understand what you said so far, yes.</p> <p>9 Q And my question is: Does the queue stop</p> <p>10 being an ordered list, as soon as you get down to 11:29:52</p> <p>11 having one or zero items left in the queue, or not?</p> <p>12 MR. LEE: Objection to form, vague,</p> <p>13 ambiguous.</p> <p>14 THE WITNESS: Again, it's not really clear</p> <p>15 from your hypothetical when you say "ordered list," 11:30:06</p> <p>16 what that means. It's also not really clear, you</p> <p>17 can -- there's a concept of something being</p> <p>18 vacuously true.</p> <p>19 So is something -- is the data structure</p> <p>20 that's empty, a data structure? 11:30:23</p> <p>21 It depends how you want to define that or a</p> <p>22 data construct.</p> <p>23 I think the main issue for me is that the</p> <p>24 way in which Google is defining the construction</p> <p>25 using terms like "ordered list of multimedia items" 11:30:37</p> <p style="text-align: right;">Page 91</p>	<p>1 And to the key point, I think this is</p> <p>2 really getting square on to your question about</p> <p>3 ordered list, a POSITA would have understood, as</p> <p>4 people note in general who understand computing and</p> <p>5 data management, that there's lots of different ways 11:32:38</p> <p>6 to implement something like a playback queue that</p> <p>7 can take different forms, different implementation</p> <p>8 approaches, different ways of realizing the concept</p> <p>9 of a playback queue.</p> <p>10 And an ordered list might be one of those 11:32:54</p> <p>11 ways, but it's not necessarily the best way to do</p> <p>12 it. Certainly not the only way to do it.</p> <p>13 And so using a construction that predefines</p> <p>14 a particular implementation detail for a construct</p> <p>15 that doesn't require that level of detail to 11:33:08</p> <p>16 represent what a playback queue does in the context</p> <p>17 of these patents is just overly narrow and</p> <p>18 restrictive.</p> <p>19 BY MR. KAPLAN:</p> <p>20 Q I would like you to focus on my question 11:33:19</p> <p>21 because it's a bit narrower than the answer you just</p> <p>22 gave.</p> <p>23 My question is: Is the fact that Google's</p> <p>24 construction uses the term "ordered list" incorrect</p> <p>25 because a queue can have zero or one items in it? 11:33:32</p> <p style="text-align: right;">Page 93</p>

<p>1 A Well, again, as described in section C, I 2 break this up into two parts: One is zero or more 3 items or zero or one items, or zero, one or two or 4 more items. That's one aspect. 5 The ordered list part, though, as I think I 11:33:51 6 just described, was incorrect not so much because of 7 the plurality of multimedia items part of ordered 8 list of multimedia items, that's a different 9 analysis. 10 But the ordered list is problematic because 11:34:07 11 a POSITA would have known, as I say here in 12 paragraphs -- in paragraph 88 -- sorry -- 87, that 13 there are different ways to implement a queue or a 14 playback queue because that's really what's doing 15 here is a playback queue, and that an ordered list 11:34:27 16 is not the essence of what it means to be a playback 17 queue. 18 So that's the reason why that's 19 problematic. It has to do with that. 20 And paragraph 88 gives an example that we 11:34:37 21 talked about earlier how you could implement a 22 playback queue that is not an ordered list, but that 23 satisfies the playback queue nature of what's 24 required by the patents. 25 Q In your example on paragraph 88 with 11:34:52 Page 94</p>	<p>1 Would it be your opinion modifying your 2 example in paragraph 88 with play_now and play_next, 3 if you played those data variables in a random 4 order, that it would still constitute a queue? 5 A Well, I think a good example of that would 11:36:31 6 be the shuffle feature that you often find in 7 playback devices where the elements in your playback 8 queue could be played back in whatever order is 9 deemed by the particular device to be shuffled. 10 In other words, not an order that a user 11:36:50 11 might necessarily anticipate wouldn't be the first 12 track of the album followed by the second track of 13 the album followed by the third track of the album 14 or whatever, be an album or playlist, but it would 15 be shuffled. 11:37:05 16 So in that particular case, in this case, 17 we have a playback queue with two elements in it and 18 we could put it in shuffle mode and I think that 19 would be actually a very common way of being able to 20 use playback devices if you get tired of hearing 11:37:18 21 songs in the same order. 22 Q If we modified your example in 23 paragraph 88, which has play_now and play_next, to 24 remove play_next, would you still have a queue? 25 A I think as described in other parts of my 11:37:33 Page 96</p>
<p>1 play_now and play_next, do those variables have an 2 order? 3 A The variables do not have an order, no. 4 Q And the variables do not need to have an 5 order in your view to qualify as a queue; right? 11:35:07 6 MR. LEE: Objection to the form. 7 THE WITNESS: So I think I describe it 8 pretty succinctly in paragraph 88 how you can have 9 data variables that are not stored as an ordered 10 list, as it says here, and, yet, still be able to 11:35:29 11 play back the media in a specified order. 12 So it describes how you could have the 13 logic of the code play things back such that 14 play_now goes first followed by play_next which goes 15 next. And the actual data variables that are part 11:35:45 16 of the data construct need not to have any order and 17 we still get the right affect that would be desired 18 for that particular implementation. 19 BY MR. KAPLAN: 20 Q We talked about random queues in the past 11:35:59 21 prior in this deposition. 22 Would it be your opinion that if you 23 randomly played the data variable play_now and the 24 random -- and randomly played -- strike that. 25 Let me try to ask a better question. 11:36:16 Page 95</p>	<p>1 declaration, the '615 and '033 patents make it very 2 clear that you can have playback queues that play a 3 song. 4 So there's a number of discussions, that's 5 actually the whole part about -- that's the whole 11:37:50 6 part in section C starting on paragraph 76 where 7 it's -- there's no reason to think that you have to 8 have multiple items in the playback queue in order 9 for it to still be in playback queue. 10 I have a bunch of different citations where 11:38:07 11 it describes being able to play a song or something 12 that's singular and that representation, the 13 implementation -- or realization of that, probably a 14 better term, of that capability is still done with 15 the playback queue, just has one item in it. 11:38:22 16 Q So the answer to my question was yes; 17 correct? 18 MR. LEE: Objection to form. 19 THE WITNESS: I think as I say in 20 paragraph 88, the '615 Patent and by extension, the 11:38:39 21 '033 Patent repeatedly describes queueing only a 22 single piece of multimedia content for playback 23 which would mean that the playback queue would only 24 contain a single resource locator that corresponds 25 to or indicates a single piece of multimedia 11:38:58 Page 97</p>

<p>1 content.</p> <p>2 So in that particular case, it's certainly</p> <p>3 plausible to have a single data variable be used to</p> <p>4 store the content in the playback queue, which is</p> <p>5 the single piece of media that's disclosed in the 11:39:14</p> <p>6 patent specifications.</p> <p>7 BY MR. KAPLAN:</p> <p>8 Q So in your example, if you just had the</p> <p>9 play_now variable, that could still be a queue;</p> <p>10 right? 11:39:34</p> <p>11 MR. LEE: Objection to form.</p> <p>12 THE WITNESS: Again, as I say in this part</p> <p>13 of the report, for example, on paragraph 82, I see</p> <p>14 nothing in the claims of these patents, or in the</p> <p>15 specification of the patents, that limits the 11:39:54</p> <p>16 playback queue to something that has to contain a</p> <p>17 plurality or plural multimedia items.</p> <p>18 It could have just a single item, in which</p> <p>19 case you could have a single data variable, as I</p> <p>20 think I mention in paragraph 47, as well, as various 11:40:10</p> <p>21 ways that the concept of a playback queue container</p> <p>22 could be realized.</p> <p>23 BY MR. KAPLAN:</p> <p>24 Q So I've asked you a specific question about</p> <p>25 your example in paragraph 88, three times now. I'm 11:40:22</p> <p>Page 98</p>	<p>1 and I don't know why you're not answering my</p> <p>2 question with respect to if you removed the</p> <p>3 play_next variable in your example in paragraph 88,</p> <p>4 yes or no whether you would have a queue still?</p> <p>5 MR. LEE: Objection to form, asked and 11:42:02</p> <p>6 answered.</p> <p>7 THE WITNESS: Yeah. I think I've given you</p> <p>8 the same answer each time.</p> <p>9 So as I mentioned, as I say in</p> <p>10 paragraph 83, there's nothing in the specification 11:42:13</p> <p>11 that requires there to be multiple items, plural.</p> <p>12 You could have a single item.</p> <p>13 The example that's in paragraph 88 is</p> <p>14 illustrating a slightly different point, which is</p> <p>15 that you can have ordered behavior without requiring 11:42:28</p> <p>16 the use of an ordered list.</p> <p>17 If you remove one of the variables and you</p> <p>18 have a single variable, you know, then assuming the</p> <p>19 example would need to be modified perhaps, the</p> <p>20 description of the example in paragraph 88 would 11:42:43</p> <p>21 have to be tweaked a little bit because it's really</p> <p>22 describing something slightly different in terms of</p> <p>23 the use case.</p> <p>24 But I thought the answer I gave to your</p> <p>25 question multiple times was: It's certainly 11:42:52</p> <p>Page 100</p>
<p>1 going to ask it one more time.</p> <p>2 Taking your example in paragraph 88, which</p> <p>3 has the play_now and play_next data variables, if we</p> <p>4 took out the play_next data variable, would you</p> <p>5 still have a queue? 11:40:37</p> <p>6 A I think I've answered that question three</p> <p>7 times by pointing out that I see nothing in the</p> <p>8 specification or the claims in these patents that</p> <p>9 require the playback queue to have multiple,</p> <p>10 multiple items in it. 11:40:55</p> <p>11 And the particular example on paragraph 88</p> <p>12 is demonstrating how you could play things back in a</p> <p>13 particular order without requiring an ordered list.</p> <p>14 So that's the particular scenario.</p> <p>15 But generalizing from the earlier 11:41:11</p> <p>16 discussions that I've given you those answers to</p> <p>17 your questions before, since the patent spec and the</p> <p>18 patent claims don't require the -- having more than</p> <p>19 one item, then you could have a queue that had an</p> <p>20 item -- had a single data variable. I think I've 11:41:33</p> <p>21 been consistent in saying that.</p> <p>22 Q Right. I'm not sure why you're fighting</p> <p>23 this question so hard.</p> <p>24 You gave an example in your declaration.</p> <p>25 I'm asking about a very, very simple modification 11:41:45</p> <p>Page 99</p>	<p>1 possible to have a playback queue that has a single</p> <p>2 data variable in it. I think that's said</p> <p>3 consistently throughout my declaration.</p> <p>4 As far as what would be -- need to be</p> <p>5 changed in paragraph 88, I would have to look more 11:43:07</p> <p>6 carefully because it's being used for a slightly</p> <p>7 different purpose.</p> <p>8 But I think the bigger answer to your</p> <p>9 question is, as far as I see, the specifications and</p> <p>10 the claims for the two patents at issue in the case, 11:43:20</p> <p>11 it's possible to have a data construct, which is a</p> <p>12 single variable, be an implementation of a playback</p> <p>13 queue.</p> <p>14 BY MR. KAPLAN:</p> <p>15 Q Let's turn to paragraph 59 of your report. 11:43:34</p> <p>16 A Okay. I'm there.</p> <p>17 Q Do you see two and three lines from the</p> <p>18 bottom of paragraph 59 you describe media items?</p> <p>19 Do you see that?</p> <p>20 A I do. 11:44:05</p> <p>21 Q What did you mean by "media items"?</p> <p>22 A Are you referring to the thing that says:</p> <p>23 "That can contain data</p> <p>24 identifying one or more media</p> <p>25 items (e.g. one or more resource 11:44:23</p> <p>Page 101</p>

<p>1 locators)?"</p> <p>2 Q You use "media items" there and also in the</p> <p>3 following line. I'm referring to both places.</p> <p>4 A So in this case -- let's see.</p> <p>5 MR. LEE: Marc, we've been going an 11:45:03</p> <p>6 hour-and-a-half and it seems like we're switching</p> <p>7 gears as Doug looks.</p> <p>8 Is this okay to take a break, lunch break?</p> <p>9 MR. KAPLAN: I prefer to get on to my</p> <p>10 pending question, but then I'm happy to take a 11:45:15</p> <p>11 break.</p> <p>12 MR. LEE: Okay. That's good.</p> <p>13 Are you thinking lunch now or press on?</p> <p>14 MR. KAPLAN: Up to you and the witness.</p> <p>15 And, of course, the court reporter and videographer. 11:45:26</p> <p>16 MR. LEE: I could -- it's almost</p> <p>17 2:00 o'clock for me, but that's fine.</p> <p>18 THE WITNESS: So my understanding of -- or</p> <p>19 what I meant by "media items" in this context would</p> <p>20 be something akin to media content, for example, 11:45:51</p> <p>21 audio files as we described before that could be</p> <p>22 identified by or associated with resource</p> <p>23 locators -- one or more resource locators.</p> <p>24 MR. KAPLAN: Let's go off the record.</p> <p>25 THE VIDEOGRAPHER: We're off the record 11:46:18</p> <p style="text-align: right;">Page 102</p>	<p>1 Q Go ahead.</p> <p>2 A A so-called persistence -- or persistent</p> <p>3 URL -- sorry -- persistent Uniform Resource Locator,</p> <p>4 or PURL, P-U-R-L, would be an example of a URL that</p> <p>5 does not contain the address of the resource that's 12:21:46</p> <p>6 being requested.</p> <p>7 Q How does a PURL identify a resource?</p> <p>8 A It provides information that is sent to</p> <p>9 essentially the lookup service or a resolution</p> <p>10 service that then goes ahead and finds where the 12:22:06</p> <p>11 actual resource is and then sends back what's called</p> <p>12 a URL redirect back to the requester that will</p> <p>13 redirect the requester back to the actual item</p> <p>14 that's being requested.</p> <p>15 So you can think of it essentially as some 12:22:25</p> <p>16 sort of proxy, or like I said, a location service or</p> <p>17 directory service where you look things up and it</p> <p>18 doesn't actually contain the address of the</p> <p>19 resource, it contains something that can be used by</p> <p>20 the persistent URL service to identify the resource. 12:22:44</p> <p>21 Q Will you turn to paragraph 103 of your</p> <p>22 report. Paragraph 103.</p> <p>23 A I'm there.</p> <p>24 Q In this paragraph, you excerpt a few</p> <p>25 different portions of the '615 Patent specification. 12:23:08</p> <p style="text-align: right;">Page 104</p>
<p>1 11:46 a.m.</p> <p>2 (Whereupon, a lunch recess was held</p> <p>3 from 11:46 a.m. to 12:20 p.m.)</p> <p>4 THE VIDEOGRAPHER: We're on the record at</p> <p>5 12:20 p.m. 12:20:24</p> <p>6 BY MR. KAPLAN:</p> <p>7 Q Welcome back, Dr. Schmidt.</p> <p>8 You understand that you're still under</p> <p>9 oath?</p> <p>10 A I do. 12:20:38</p> <p>11 Q Let's turn to paragraph 100 of your</p> <p>12 declaration.</p> <p>13 A I'm there.</p> <p>14 Q In the sentence beginning, "Notably in this</p> <p>15 paragraph," you say that a POSITA would understand 12:20:59</p> <p>16 that a URL is so limited to having an address.</p> <p>17 Do you see that?</p> <p>18 A I -- is it the part that says, "Whereas a</p> <p>19 POSITA would understand a URL is not so limited"; is</p> <p>20 that what you're referring to? 12:21:18</p> <p>21 Q Correct.</p> <p>22 A I see that, yes.</p> <p>23 Q Can you give me an example of a URL that</p> <p>24 doesn't have an address?</p> <p>25 A Yes. 12:21:29</p> <p style="text-align: right;">Page 103</p>	<p>1 Do you see that?</p> <p>2 A I do.</p> <p>3 Q Are any of those portions of the</p> <p>4 specification referencing resource locators?</p> <p>5 A If I understand your question, you're 12:23:27</p> <p>6 referring to the portions that are from the '615</p> <p>7 Patent that starts at the very first indented</p> <p>8 paragraph on page 35 where it's talking about</p> <p>9 uniform resource indicator.</p> <p>10 And then shortly thereafter, it's talking 12:24:25</p> <p>11 about how an application has the song identifier,</p> <p>12 which is another quote from the '615 spec, and then</p> <p>13 shortly below there it talks about an identifier for</p> <p>14 a single track and so on.</p> <p>15 Are those the paragraphs that you're 12:24:40</p> <p>16 referring to that are excerpts from spec?</p> <p>17 Q That's right.</p> <p>18 A Right.</p> <p>19 So all of those things, as I say here in</p> <p>20 paragraph 104, right underneath that: 12:24:50</p> <p>21 "It is my opinion that a</p> <p>22 POSITA would understand from</p> <p>23 reading the '615 Patent that the</p> <p>24 'resource locator' -- that's in</p> <p>25 the claims -- "is meant to 12:25:02</p> <p style="text-align: right;">Page 105</p>

<p>1 encompass more than a 'URL,' as</p> <p>2 evidenced by at least the '615</p> <p>3 Patent references to" -- and then</p> <p>4 I talk about -- "some other</p> <p>5 identification,' 'identifier,' 12:25:12</p> <p>6 and 'information,'" and so on.</p> <p>7 And these are the kinds of things that are</p> <p>8 described above: Song identifier, identifier,</p> <p>9 Uniform Resource Locator. Those are examples --</p> <p>10 those are all examples given in the specification of 12:25:24</p> <p>11 resource locators demonstrating to my bigger point</p> <p>12 here in this section that resource locator is a</p> <p>13 different broader concept than a so-called Uniform</p> <p>14 Resource Locator.</p> <p>15 Q Is it your opinion that PURLs are used to 12:25:43</p> <p>16 identify resources in the Cloud?</p> <p>17 MR. LEE: Objection; form, foundation.</p> <p>18 THE WITNESS: I'm sorry. Could you repeat</p> <p>19 the question?</p> <p>20 BY MR. KAPLAN: 12:26:03</p> <p>21 Q Is it your opinion that PURLs are used to</p> <p>22 identify resources in the Cloud?</p> <p>23 A PURLs can be used to identify resources in</p> <p>24 a number of different locations or different</p> <p>25 contacts. The Cloud could certainly be used as one 12:26:17</p> <p>Page 106</p>	<p>1 the -- Microsoft's COM mechanism and D-COMM</p> <p>2 mechanism used something called a moniker, which is</p> <p>3 another way of being able to identify resources that</p> <p>4 are existing in servers or Clouds, or basically</p> <p>5 different ways of being able to access information 12:27:52</p> <p>6 across the Internet or the World Wide Web.</p> <p>7 There's also other concepts that have been</p> <p>8 used over the years, such as the mechanisms you</p> <p>9 would find in the data distribution service, which I</p> <p>10 think uses a resource -- an object reference like 12:28:07</p> <p>11 model to identify resources in distributed systems</p> <p>12 and networks and clouds.</p> <p>13 There's also things such as universal</p> <p>14 unique IDs, UUIDs, global unique IDs, GUIDs. All</p> <p>15 kinds of different ways to be able to identify 12:28:25</p> <p>16 resources in Clouds and other distributed systems.</p> <p>17 So URL is just one of a number of different</p> <p>18 techniques that are used in order to identify such</p> <p>19 resources.</p> <p>20 Q Do each of the examples you just gave 12:28:37</p> <p>21 identify location?</p> <p>22 MR. LEE: Objection to form.</p> <p>23 THE WITNESS: So that's a great question.</p> <p>24 So kind of going back to the concept of a</p> <p>25 persistent URL, with CORBAs object references, you 12:28:49</p> <p>Page 108</p>
<p>1 of them.</p> <p>2 Q Are URLs used to identify resources in the</p> <p>3 Cloud?</p> <p>4 MR. LEE: Objection to form.</p> <p>5 THE WITNESS: So just to be clear, when we 12:26:31</p> <p>6 say "the Cloud," we're referring broadly to Cloud</p> <p>7 services provided by Cloud providers; is that</p> <p>8 correct?</p> <p>9 BY MR. KAPLAN:</p> <p>10 Q That's fine. 12:26:46</p> <p>11 A So uniform resources -- Uniform Resource</p> <p>12 Locators, or URLs, are one of a number of different</p> <p>13 naming regimes that can be used to identify</p> <p>14 resources in the Cloud.</p> <p>15 Q What are the other naming regimes that can 12:27:03</p> <p>16 be used to identify resources in the Cloud?</p> <p>17 A Oh, there's all kinds of things.</p> <p>18 A good example from the world of the common</p> <p>19 object request broker architecture, technology</p> <p>20 standards and specifications and implementations, 12:27:19</p> <p>21 which began in the mid 1990s continuing on to today</p> <p>22 would be something called an object reference, which</p> <p>23 is another way of being able to locate resources in</p> <p>24 the Cloud.</p> <p>25 Other technologies over time, such as 12:27:33</p> <p>Page 107</p>	<p>1 can use object references in a couple different</p> <p>2 ways.</p> <p>3 One way to use an object reference is to</p> <p>4 identify a particular resource in a distributed</p> <p>5 system or in a Cloud. That would be one where the 12:29:04</p> <p>6 address information is actually encoded in the</p> <p>7 object reference.</p> <p>8 As with persistent URLs, however, you can</p> <p>9 also have object references that didn't point to a</p> <p>10 particular resource but they pointed to some kind of 12:29:17</p> <p>11 naming service or directory service or locator</p> <p>12 service or whatnot, and that would then find the</p> <p>13 resource of interest, redirect -- send a redirect</p> <p>14 message back to the client, called location</p> <p>15 forwarding response, and then that would cause the 12:29:34</p> <p>16 client to redirect the call to the actual resource.</p> <p>17 Very, very much along the same lines of how</p> <p>18 a persistent URL works.</p> <p>19 So these concepts of distributed location</p> <p>20 and distributed naming and so on have been around 12:29:47</p> <p>21 for decades.</p> <p>22 BY MR. KAPLAN:</p> <p>23 Q How would you implement a system that can</p> <p>24 playback multiple songs without using a queue?</p> <p>25 MR. LEE: Objection to the form, 12:29:58</p> <p>Page 109</p>

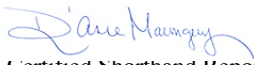

<p>1 incomplete, vague, foundation.</p> <p>2 THE WITNESS: How could -- I'm not sure I</p> <p>3 understand the question.</p> <p>4 BY MR. KAPLAN:</p> <p>5 Q Do you have a playback system that can 12:30:13</p> <p>6 playback multiple songs?</p> <p>7 Is it possible to implement that without</p> <p>8 using a queue?</p> <p>9 MR. LEE: Same objection.</p> <p>10 THE WITNESS: Probably. I haven't really 12:30:29</p> <p>11 thought about it very hard, but it's probably</p> <p>12 doable. I'm not sure. I don't know -- quite know</p> <p>13 the context in which you're asking the question.</p> <p>14 But it could be possible. I don't really</p> <p>15 know. I haven't done the analysis to think that 12:30:41</p> <p>16 through.</p> <p>17 BY MR. KAPLAN:</p> <p>18 Q Do you have any examples that you can think</p> <p>19 of on how to implement such a system without using a</p> <p>20 queue? 12:30:50</p> <p>21 A I would have to think about it. I don't</p> <p>22 know off the top of my head.</p> <p>23 Q Is Sonos's own music queue a playback</p> <p>24 queue?</p> <p>25 MR. LEE: Objection to form, foundation. 12:31:06</p> <p style="text-align: right;">Page 110</p>	<p>1 THE WITNESS: Like I said, I'm not -- I</p> <p>2 don't remember enough about the context in which I</p> <p>3 used them in order to form an opinion on that or</p> <p>4 not.</p> <p>5 BY MR. KAPLAN: 12:32:27</p> <p>6 Q How did you use the Sonos products?</p> <p>7 A My son has some Sonos speakers and he has</p> <p>8 shown me how to use them, but I don't recall the</p> <p>9 details of how he did it.</p> <p>10 Q Do you recall if you played more than one 12:32:48</p> <p>11 song on the Sonos speakers that you used?</p> <p>12 A No.</p> <p>13 Q Did you cite any technical dictionaries</p> <p>14 that define the term "resource locator" by itself?</p> <p>15 A As I say on paragraph 99 in my claim 12:33:23</p> <p>16 construction declaration, the opinions that I put</p> <p>17 forth are based on my analysis of the intrinsic and</p> <p>18 extrinsic evidence of the '615 Patent as cited</p> <p>19 below.</p> <p>20 My own experience is -- and my 12:33:39</p> <p>21 determination of how the POSITA would understand --</p> <p>22 would have understood the term "resource locator" in</p> <p>23 the context of the '615 Patent at the time of the</p> <p>24 invention.</p> <p>25 And looking through the list of intrinsic 12:33:49</p> <p style="text-align: right;">Page 112</p>
<p>1 I don't know if he's looked at Sonos's</p> <p>2 systems.</p> <p>3 THE WITNESS: Yeah. I'm not really</p> <p>4 familiar with the details of how Sonos works.</p> <p>5 I'm also not sure if there's one queue or 12:31:22</p> <p>6 I'm not sure if there's -- without the Sonos queue,</p> <p>7 I don't know if the products have different ways of</p> <p>8 implementing the queues, much like disclosed in the</p> <p>9 patents, there's different ways of implementing</p> <p>10 playback queues, so I'm not familiar with how those 12:31:35</p> <p>11 worked.</p> <p>12 BY MR. KAPLAN:</p> <p>13 Q Have you ever used Sonos products to play</p> <p>14 music from a queue?</p> <p>15 MR. LEE: Objection; relevance. 12:31:44</p> <p>16 THE WITNESS: I've used Sonos's products</p> <p>17 before, but I'm not sure the way in which I used</p> <p>18 them, whether I used the queue or not. I didn't</p> <p>19 look at the internals of how they were set up to be</p> <p>20 configured. 12:32:06</p> <p>21 BY MR. KAPLAN:</p> <p>22 Q Would you have to look at the internals of</p> <p>23 how they're set up to be configured to determine</p> <p>24 whether or not they used a queue?</p> <p>25 MR. LEE: Objection; form, hypothetical. 12:32:14</p> <p style="text-align: right;">Page 111</p>	<p>1 and extrinsic evidence that I cite here, I do not</p> <p>2 have dictionary definitions I cite to, intrinsic</p> <p>3 evidence and also extrinsic evidence in the form of</p> <p>4 other, I believe mostly, other patents from the</p> <p>5 general timeframe of the invention that used the 12:34:11</p> <p>6 word "resource locator" -- or the phrase "resource</p> <p>7 locator."</p> <p>8 Q Let's say when a user transfers playback</p> <p>9 from their computing device to the playback device</p> <p>10 that they have an Internet server that sends the 12:34:38</p> <p>11 playback device a list of media items and those are</p> <p>12 going to be played back in some order on the</p> <p>13 playback device.</p> <p>14 Do you understand the hypothetical so far?</p> <p>15 A Sort of. So -- 12:34:54</p> <p>16 Q Sure.</p> <p>17 Under your constructions, do you think that</p> <p>18 the Internet server is adding identifiers to a local</p> <p>19 playback queue?</p> <p>20 MR. LEE: Objection to the form, incomplete 12:35:09</p> <p>21 hypothetical, foundation.</p> <p>22 THE WITNESS: Wow. I would have to take a</p> <p>23 look -- I mean, to do a proper analysis, I really</p> <p>24 have to spend some time looking through the means by</p> <p>25 which the information was requested and received and 12:35:29</p> <p style="text-align: right;">Page 113</p>

<p>1 so on to answer that question properly.</p> <p>2 MR. LEE: Are you asking if that's the only</p> <p>3 way that that could work, Marc?</p> <p>4 MR. KAPLAN: My question was under</p> <p>5 Dr. Schmidt's constructions, would he agree that the 12:35:44</p> <p>6 Internet server's adding identifiers to a local</p> <p>7 playback queue.</p> <p>8 MR. LEE: Yeah.</p> <p>9 Objection; vague and ambiguous, relevance,</p> <p>10 foundation. 12:35:58</p> <p>11 BY MR. KAPLAN:</p> <p>12 Q Under your constructions, Dr. Schmidt,</p> <p>13 would you agree that the Internet server's adding</p> <p>14 resource locators to a local playback queue?</p> <p>15 MR. LEE: Objection; vague. 12:36:10</p> <p>16 I don't even know what construction we're</p> <p>17 talking about.</p> <p>18 THE WITNESS: So I will answer the question</p> <p>19 by reference to section B in -- subsection B in</p> <p>20 section 7 of my report which talks about issues 12:36:34</p> <p>21 related to what a playback queue might or might not</p> <p>22 contain with respect to multimedia items, whether or</p> <p>23 not they would be in so-called data form or</p> <p>24 identifier resource locator form.</p> <p>25 And as I say throughout that section, 12:36:54</p> <p style="text-align: right;">Page 114</p>	<p>1 will you understand what I'm referencing?</p> <p>2 MR. LEE: Same objection.</p> <p>3 I think he's just critiquing those</p> <p>4 constructions of Google's.</p> <p>5 THE WITNESS: So in looking at -- if I have 12:38:15</p> <p>6 in my declaration under Google's proposed</p> <p>7 construction, Google's proposed construction, as we</p> <p>8 all know, is an ordered list of multimedia items</p> <p>9 that's selected by the user for playback and Sonos's</p> <p>10 proposed construction is plain and ordinary meaning, 12:38:31</p> <p>11 no construction is necessary.</p> <p>12 So is that -- when you say Sonos's</p> <p>13 construction, are you -- do you mean by that plain</p> <p>14 and ordinary meaning, no construction necessary?</p> <p>15 BY MR. KAPLAN: 12:38:47</p> <p>16 Q I mean the plain and ordinary meaning</p> <p>17 construction proposed by Sonos and as discussed by</p> <p>18 you in your declaration.</p> <p>19 A Okay.</p> <p>20 Q So you can answer. 12:39:03</p> <p>21 A Now that we've narrowed it down to what is</p> <p>22 meant by my construction, which is really the plain</p> <p>23 and ordinary meaning no construction necessary</p> <p>24 construction, can we please repeat the question?</p> <p>25 Q Under Sonos's proposed constructions, would 12:39:17</p> <p style="text-align: right;">Page 116</p>
<p>1 there's different ways to implement such a mechanism</p> <p>2 and -- or such mechanisms, and so I'd have to know a</p> <p>3 little bit more in your hypothetical about what</p> <p>4 we're referring to here is and how it's being used</p> <p>5 and specifically what you mean by my construction. 12:37:15</p> <p>6 BY MR. KAPLAN:</p> <p>7 Q So to answer the last question, the</p> <p>8 construction -- when I said "my construction," I</p> <p>9 meant the construction that you agreed with in your</p> <p>10 declaration, which is Sonos's construction. 12:37:25</p> <p>11 A Okay.</p> <p>12 MR. LEE: Same objection.</p> <p>13 Still not sure what construction.</p> <p>14 BY MR. KAPLAN:</p> <p>15 Q Well, I want to make sure it's clear. 12:37:37</p> <p>16 Dr. Schmidt, do you understand which</p> <p>17 constructions I'm referring to?</p> <p>18 MR. LEE: Objection to Sonos's</p> <p>19 construction.</p> <p>20 MR. KAPLAN: I don't know how I can refer 12:37:50</p> <p>21 to Sonos's construction otherwise, so let me ask the</p> <p>22 witness.</p> <p>23 BY MR. KAPLAN:</p> <p>24 Q If I refer to Sonos's construction for the</p> <p>25 local playback queue and resource locator terms, 12:38:00</p> <p style="text-align: right;">Page 115</p>	<p>1 you agree that the Internet server's adding resource</p> <p>2 locators to a playback queue?</p> <p>3 MR. LEE: Same objection; incomplete</p> <p>4 hypothetical, vague.</p> <p>5 THE WITNESS: Again, I would really have to 12:39:31</p> <p>6 take a look to see what is going on here. I don't</p> <p>7 know how said Internet servers work. I don't know</p> <p>8 how the playback queue is being defined. I don't</p> <p>9 know how -- I mean, in your hypothetical, I'm not</p> <p>10 sure what you mean by "resource locators" and what 12:39:53</p> <p>11 kinds of information is coming from the Internet.</p> <p>12 So really to do a fair and thorough justice</p> <p>13 to your question, I would have to know more -- the</p> <p>14 hypothetical would have to be flushed out quite a</p> <p>15 bit. I probably would have to do some analysis to 12:40:10</p> <p>16 see what it's doing to know if it matches the</p> <p>17 construction, the plain and ordinary meaning</p> <p>18 construction.</p> <p>19 BY MR. KAPLAN:</p> <p>20 Q Are you familiar with the C++ Standard 12:40:18</p> <p>21 Template Library?</p> <p>22 A Yes.</p> <p>23 Q You've taught the C++ Standard Template</p> <p>24 Library in your classes at Vanderbilt?</p> <p>25 A I have. 12:40:30</p> <p style="text-align: right;">Page 117</p>

<p>1 Q Does the C++ Standard Library define</p> <p>2 queues?</p> <p>3 A Yes. It defines several different queues.</p> <p>4 Q There's one queue in particular that's</p> <p>5 defined in the C++ Standard Template Library; right? 12:40:40</p> <p>6 MR. LEE: Objection.</p> <p>7 THE WITNESS: No, there's not.</p> <p>8 BY MR. KAPLAN:</p> <p>9 Q How many different queues are defined in</p> <p>10 the C++ Standard Template Library? 12:40:41</p> <p>11 A Well, there's at least three different</p> <p>12 queues that are defined in the Standard Template</p> <p>13 Library.</p> <p>14 Q What are their names?</p> <p>15 A One is called Queue, another one is called 12:41:03</p> <p>16 Priority Queue, and there's another one that's</p> <p>17 called Stack.</p> <p>18 But then there's other types of queues that</p> <p>19 are defined in other ways that work in different --</p> <p>20 that provide collections of data. 12:41:19</p> <p>21 So there's probably more of them, but those</p> <p>22 are three -- they're actually what's known as</p> <p>23 container adapters.</p> <p>24 Q So when I say the C++ Standard Template</p> <p>25 Library Queue, can we agree that I'm referring to 12:41:33</p> <p style="text-align: right;">Page 118</p>	<p>1 If I said the class that's called Queue,</p> <p>2 would you understand what I'm referring to?</p> <p>3 A Yes.</p> <p>4 Q The class that's called Queue, is that a</p> <p>5 FIFO structure? 12:43:11</p> <p>6 MR. LEE: Objection to the form,</p> <p>7 foundation, vague.</p> <p>8 THE WITNESS: That's a good question.</p> <p>9 I believe it is, but I would have to go</p> <p>10 back and double check to make sure there's not other 12:43:39</p> <p>11 capabilities that can be accessed through that</p> <p>12 interface.</p> <p>13 BY MR. KAPLAN:</p> <p>14 Q With the class Queue, you can push elements</p> <p>15 into the end of the queue; correct? 12:43:49</p> <p>16 MR. LEE: Objection; form.</p> <p>17 THE WITNESS: The class in C++ whose name</p> <p>18 is Queue, as I recall, has a push method that will</p> <p>19 add an element to the end of the underlying data</p> <p>20 representation. 12:44:21</p> <p>21 There could be different representations</p> <p>22 used to implement the queue. That's one of the</p> <p>23 features of queues or container adapters in C++, is</p> <p>24 you can actually have data structures under the hood</p> <p>25 that implement the mechanisms that they provide. 12:44:36</p> <p style="text-align: right;">Page 120</p>
<p>1 the actual queue as designed in the C++ Standard</p> <p>2 Template Library?</p> <p>3 THE REPORTER: I'm sorry. Can you say that</p> <p>4 question again?</p> <p>5 MR. KAPLAN: Maybe I can rephrase the 12:41:54</p> <p>6 question just to make sure the witness and I are</p> <p>7 speaking the same language.</p> <p>8 BY MR. KAPLAN:</p> <p>9 Q When I ask what the names of the different</p> <p>10 queues are as defined in the C++ Standard Template 12:42:06</p> <p>11 Library, I believe you said that they are Queue,</p> <p>12 Priority Queue and Stack.</p> <p>13 Is that fair?</p> <p>14 A Those are some of the queues -- the</p> <p>15 queueing mechanisms that are defined in C++ Standard 12:42:21</p> <p>16 Template Library.</p> <p>17 Q So the first one of those is called Queue</p> <p>18 and I'd like to refer to that as the C++ Standard</p> <p>19 Template Library Queue. Is that okay?</p> <p>20 A I think maybe a more precise way of saying 12:42:39</p> <p>21 that would be the container adapter whose class name</p> <p>22 is Queue, because, again, there's other kinds of</p> <p>23 queues that are part of the C++ Standard Template</p> <p>24 Library.</p> <p>25 Q That's a bit of a mouthful. 12:42:58</p> <p style="text-align: right;">Page 119</p>	<p>1 But if my memory serves me correctly, one</p> <p>2 of the operations on the C++ STL queue is indeed</p> <p>3 push, keeping in mind that there are other types of</p> <p>4 queues in C++ STL.</p> <p>5 BY MR. KAPLAN: 12:44:54</p> <p>6 Q The class queue has the ability to pop</p> <p>7 elements off the front of the queue; correct?</p> <p>8 MR. LEE: Same objection; form, vague.</p> <p>9 THE WITNESS: Again, it's my recollection</p> <p>10 that the C++ class named queue has pop operator that 12:45:06</p> <p>11 will remove an item from the front of the queue,</p> <p>12 although it's got rather strange semantics in that</p> <p>13 it does not actually return the item that was</p> <p>14 removed, which is kind of strange.</p> <p>15 But, again, it's one of a number of 12:45:30</p> <p>16 different ways of implementing the concept of the</p> <p>17 queue.</p> <p>18 MR. KAPLAN: Dr. Schmidt, could you open</p> <p>19 Exhibit 6, which I've just uploaded.</p> <p>20 (Whereupon, Google Exhibit 6 was 12:45:51</p> <p>21 marked for identification by the</p> <p>22 Court Reporter.)</p> <p>23 THE WITNESS: Okay. I've got it.</p> <p>24 BY MR. KAPLAN:</p> <p>25 Q Exhibit 6 is a presentation entitled "Key 12:46:23</p> <p style="text-align: right;">Page 121</p>

<p>1 STL Features: Containers, Iterators, & Algorithms,"</p> <p>2 and it has your name, Douglas C. Schmidt, on the</p> <p>3 first page.</p> <p>4 Do you see that?</p> <p>5 A I do. 12:46:41</p> <p>6 Q Is this a presentation that you created</p> <p>7 while you were at Vanderbilt?</p> <p>8 A Actually, it's a portion of a presentation</p> <p>9 that I created when I was a professor earlier and</p> <p>10 have used at Vanderbilt. 12:46:55</p> <p>11 Q You've used this presentation Exhibit 6 at</p> <p>12 Vanderbilt?</p> <p>13 A That's correct.</p> <p>14 Q Did you use this presentation in</p> <p>15 conjunction with teaching a C++ class? 12:47:06</p> <p>16 A It was a course called Intermediate</p> <p>17 Software Design, which is a course that covers</p> <p>18 different ways of advanced -- well, maybe</p> <p>19 intermediary programming -- intermediate software</p> <p>20 development focusing on design patterns, as well as 12:47:24</p> <p>21 good programming techniques, debugging techniques,</p> <p>22 source code, and software engineering, management</p> <p>23 techniques, and parts of C++ are also covered as</p> <p>24 well.</p> <p>25 Q If you go to page 7 of this presentation, 12:47:40</p> <p style="text-align: right;">Page 122</p>	<p>1 this is an excerpt from a much longer set of</p> <p>2 material on C++ and the Standard Template Library.</p> <p>3 If you were to go look in more detail at</p> <p>4 later parts that have been omitted here in the</p> <p>5 slides you're showing me, there's extensive 12:49:08</p> <p>6 discussions of the APIs that are available for both</p> <p>7 Stack -- well, for both Stack, Queue and Priority</p> <p>8 Queue, and they all have the same API.</p> <p>9 And so as a result, they're treated</p> <p>10 inconsistent -- in consistent ways with respect to 12:49:24</p> <p>11 the operations. It's simply that the way in which</p> <p>12 the container's implemented and the semantics as</p> <p>13 defined in C++, which is not the only way to do</p> <p>14 things, of course, relative to what queues are;</p> <p>15 certainly not relevant to playback queues, per se. 12:49:44</p> <p>16 So, yes. There's parts of those APIs that</p> <p>17 are similar, so they all have the same interface.</p> <p>18 Q In the larger set of materials that you're</p> <p>19 referring to, those materials refer to the class</p> <p>20 queue -- strike that. 12:49:59</p> <p>21 Sorry. I have to do a big wind up again in</p> <p>22 the larger set of materials that you're referring</p> <p>23 to.</p> <p>24 Are there portions of those materials that</p> <p>25 refer to the class Stack as a queue? 12:50:12</p> <p style="text-align: right;">Page 124</p>
<p>1 there's a chart on the right. It includes a column,</p> <p>2 in the second row down, that chart element says</p> <p>3 "queue" and then to the right of that there's a</p> <p>4 column that says "characteristics." It says,</p> <p>5 "First-in/first-out data structure." 12:48:00</p> <p>6 Do you see that?</p> <p>7 A There's a bunch of pages named number 7.</p> <p>8 Which one are you referring to in the PDF?</p> <p>9 Q There are. I'm actually referring to the</p> <p>10 final page -- 12:48:15</p> <p>11 A Okay.</p> <p>12 Q -- of the PDF.</p> <p>13 A Yes. Those are the examples of the various</p> <p>14 container adapters we were talking about earlier.</p> <p>15 Q Next to queue, it says, "First-in/first-out 12:48:27</p> <p>16 data structure."</p> <p>17 Do you see that?</p> <p>18 A I do.</p> <p>19 Q Does that refresh your recollection as to</p> <p>20 whether or not the class queue is the 12:48:34</p> <p>21 first-in/first-out data structure?</p> <p>22 A That's the way it's defined in C++, yes.</p> <p>23 Q In this presentation, do you refer to</p> <p>24 stacks as queues?</p> <p>25 A If you take a -- this is -- as I mentioned, 12:48:52</p> <p style="text-align: right;">Page 123</p>	<p>1 A There are portions of that material that</p> <p>2 describe how the interfaces for stacks and queues</p> <p>3 and priority queues are all the same and, therefore,</p> <p>4 what differs is the way the implementation handles</p> <p>5 the protocol for adding or removing elements from 12:50:31</p> <p>6 the container adapter.</p> <p>7 Q For example -- sorry.</p> <p>8 Go ahead.</p> <p>9 A So when I teach those parts of the course,</p> <p>10 I always mention that the interface is for Stack and 12:50:44</p> <p>11 Queue and Priority Queue are the same.</p> <p>12 Q The operations within the class queue are</p> <p>13 different than the operations within the class</p> <p>14 Stack; right -- strike that.</p> <p>15 I can ask a better question. 12:51:06</p> <p>16 The functions within the class queue are</p> <p>17 different than the functions within the class Stack;</p> <p>18 correct?</p> <p>19 MR. LEE: Objection to form.</p> <p>20 THE WITNESS: I think as I just explained, 12:51:16</p> <p>21 the interface is for Stack and Queue and Priority</p> <p>22 Queue are all the same. They have operations</p> <p>23 like -- or largely the same. They have operations</p> <p>24 like -- I believe it's push and pop, which are very</p> <p>25 strange names for a queue especially. 12:51:32</p> <p style="text-align: right;">Page 125</p>

<p>1 I believe, if I'm not mistaken, they have</p> <p>2 operations push and pop defined on all of them, and</p> <p>3 so those operations have the same signatures.</p> <p>4 Is that what you are asking?</p> <p>5 BY MR. KAPLAN: 12:51:48</p> <p>6 Q Is the class Stack in the C++ Standard</p> <p>7 Template Library a last-in/first-out data structure?</p> <p>8 MR. LEE: Objection to form.</p> <p>9 THE WITNESS: It depends what you'd</p> <p>10 substantiate it with. 12:52:05</p> <p>11 BY MR. KAPLAN:</p> <p>12 Q So can I draw your attention to the last</p> <p>13 page of the presentation in Exhibit 6.</p> <p>14 And on that last page next to Stack, it</p> <p>15 says "first-in/last-out data structure." 12:52:17</p> <p>16 Do you see that?</p> <p>17 A I do.</p> <p>18 Q Do you agree that the Stack is a</p> <p>19 first-in/last-out data structure?</p> <p>20 A Again, if you're asking me in the context 12:52:26</p> <p>21 of C++ STL, it all depends on what kind of container</p> <p>22 parameter you pass to the container adapter.</p> <p>23 Container adapters are basically, as the name</p> <p>24 suggests, adapters, and you provide them with</p> <p>25 container implementations, for lack of a better 12:52:51</p> <p style="text-align: right;">Page 126</p>	<p>1 Does a Queue as defined by the C++ Standard</p> <p>2 Template Library have order?</p> <p>3 MR. LEE: Objection to form.</p> <p>4 THE WITNESS: Again, keeping in mind the</p> <p>5 bigger context here, the term "playlist queue" as 12:54:23</p> <p>6 defined in the '615 and '033 Patent and not relating</p> <p>7 to C++ in any way, shape, or form.</p> <p>8 One of the default behaviors for the C++</p> <p>9 container adapter queue is to provide</p> <p>10 first-in/first-out semantics. 12:54:42</p> <p>11 As to how it achieves that, again, is an</p> <p>12 implementation detail.</p> <p>13 BY MR. KAPLAN:</p> <p>14 Q My question was: Does a queue as defined</p> <p>15 in the C++ Standard Template Library have order? 12:54:59</p> <p>16 MR. LEE: Objection to form.</p> <p>17 THE WITNESS: Again, going back to what I</p> <p>18 was saying before, in the C++ Standard Template</p> <p>19 Library, the behavior of the queue depends on how</p> <p>20 you substantiate the queue container and adapter. 12:55:20</p> <p>21 So there's no one answer to that question, number 1.</p> <p>22 So the answer is it depends similar to the question</p> <p>23 you asked me before.</p> <p>24 Likewise, just to make the point more</p> <p>25 clear, the C++ STL container adapters that have the 12:55:34</p> <p style="text-align: right;">Page 128</p>
<p>1 term, and they adapt them in different ways.</p> <p>2 So depending what you pass in, how you --</p> <p>3 how you parameterize the container adapter, be it</p> <p>4 Stacked, Queue or Priority Queue, that actually</p> <p>5 dictates the behavior that you will get when you 12:53:08</p> <p>6 called a common operations push and pop on instances</p> <p>7 of those container adapters that have been</p> <p>8 substantiated.</p> <p>9 Q So is it your opinion that the Stack</p> <p>10 container might be a first-in/last-out data 12:53:22</p> <p>11 structure and it might not?</p> <p>12 A That is correct.</p> <p>13 Q Is your opinion that the Queue might be a</p> <p>14 first-in/first-out data structure, or it might not?</p> <p>15 A That's also correct. 12:53:33</p> <p>16 Q Is that what your presentation says here on</p> <p>17 the final page of Exhibit 6?</p> <p>18 A No. This is just describing one of the</p> <p>19 out-of-the box behaviors. But if your question was</p> <p>20 how does a Stack work, how does the Stack container 12:53:48</p> <p>21 adapter work in C++ STL, the thorough answer to the</p> <p>22 question is it depends on the type of container</p> <p>23 implementation that you use to substantiate the</p> <p>24 Stack template.</p> <p>25 Q Does a Stack -- strike that. 12:54:06</p> <p style="text-align: right;">Page 127</p>	<p>1 word "queue" in them are not at all relevant in the</p> <p>2 context of playlist queue as defined in the '615 and</p> <p>3 the '033 Patent specifications and claims.</p> <p>4 MR. KAPLAN: Can we take a very quick</p> <p>5 three- or four-minute break? 12:56:10</p> <p>6 MR. LEE: Sure. Let's go off the record.</p> <p>7 Sit in place.</p> <p>8 THE VIDEOGRAPHER: We're off the record at</p> <p>9 12:56 p.m.</p> <p>10 (Whereupon, a recess was held 12:56:19</p> <p>11 from 12:56 p.m. to 1:02 p.m.)</p> <p>12 THE VIDEOGRAPHER: We're on the record at</p> <p>13 1:02 p.m.</p> <p>14 MR. KAPLAN: Dr. Schmidt, thank you very</p> <p>15 much for your time today. 13:02:50</p> <p>16 No further questions.</p> <p>17 THE WITNESS: Thank you.</p> <p>18 MR. LEE: We have no questions for you</p> <p>19 either, Dr. Schmidt.</p> <p>20 THE WITNESS: Thank you. 13:02:56</p> <p>21 MR. KAPLAN: You may reserve signature.</p> <p>22 MR. LEE: We'll reserve signature.</p> <p>23 Thank you, Marc.</p> <p>24 THE VIDEOGRAPHER: Off the record at</p> <p>25 1:03 p.m. 13:03:09</p> <p style="text-align: right;">Page 129</p>
